PLUG AND ABANDONMENT PROCEDURE

February 23, 2005

Lindrith B Unit #3

Chacon Dakota Associated SW, Section 21, T24N, R3W, Rio Arriba County, New Mexico API 30-039-22278 / Lat: 36^ 17" 26.6" N / Long: 107^ 10.0" 0.1" W

Note: All cement volumes use 100% excess outside pipe and 50' excess inside. The stabilizing wellbore fluid will be 8.3 ppg, sufficient to balance all exposed formation pressures.

All cement will be ASTM Type III, mixed at 14.8 ppg with a 1.32 cf/sx yield (except plug #1 will be Class B due to high temperature).

- Install and test rig anchors. Prepare blow pit. Comply with all NMOCD, BLM and ConocoPhillips safety rules and regulations. Conduct safety meeting for all personnel on location. MOL and RU daylight pulling unit. NU relief line and blow well down; kill with water as necessary. ND wellhead and NU BOP and stripping head; test BOP.
- 2. TOH and tally 2.375" tubing and visually inspect. If necessary LD tubing and PU workstring. Round-trip 4.5" wireline gauge ring or casing scraper to 7131'.
- 3. Plug #1 (Dakota perforations, 7131' 7031'): TIH and set 4.5" cement at 7131'. Pressure test tubing to 1000#. Load casing with water and circulate well clean. Pressure test casing to 800#. If casing does not test, then spot or tag subsequent plugs as appropriate. Mix 11 sxs Class B cement and set a balanced plug above retainer to cover the Dakota perforations. PUH to 6265'.

 6006 5906
- 4. Plug #2 (Gallup top, 6265' 6465'): Mix 11 sxs Type III cement and spot balanced plug inside casing to cover the Gallup top. TOH with tubing.
- 5. Plug #3 (Mesaverde top, 4678' 4578'): Perforate 3 squeeze holes at 4678'. Attempt to establish rate into squeeze holes if the casing pressure tested. Set a 4.5" cement retainer at 4628'. Establish injection rate below cement retainer. Mix and pump 46 sxs Type III cement, squeeze 35 sxs outside the 4.5" casing and leave 11 sxs inside casing to cover the Mesaverde top. TOH.
- 6. Plug #4 (Pictured Cliffs, Fruitland, Kirtland, Ojo Alamo tops, 3040' 2475'): Perforate 3 squeeze holes through the 4.5" casing at 3040'. Attempt to establish rate into squeeze holes if the casing pressure tested. Set 4.5" cement retainer at 2990'. Establish rate into the 4.5" X 8.625" annulus. Mix and pump 158 sxs cement, squeeze 116 sxs outside the 4.5" casing and leave 42 sxs inside the casing. TOH with tubing.
- 7. Plug #5 (Nacimiento top, 1275' 1175'): Perforate 3 squeeze holes through the 4.5" casing at 1275'. Attempt to establish rate into squeeze holes if the casing pressure tested. TIH with tubing to 1275'. Mix and spot 39 sxs cement in the 4.5" casing; PU to 500' and squeeze 28 sxs outside the 4.5" casing and leave 11 sxs inside the casing. If the casing did not test before perforating, then use a 4.5" cement retainer at 1225' to set plug. TOH with tubing.
- 8. Plug #6 (8-5/8" casing shoe, 363' Surface): Perforate 3 squeeze holes through the 4.5" and 8.625" casings at 363'. Attempt to establish circulation to surface out the intermediate and bradenhead valves. Mix approximately 240 sxs cement and pump down 4.5" casing to circulate good cement out 4.5" X 8.625" annulus and the bradenhead. Shut in well and WOC.
- 9. ND BOP and cut off wellhead below surface casing flange. Install P&A marker with cement to comply with regulations. RD, MOL and cut off anchors. Restore location per BLM stipulations.
