Describe Cause of Problem and Remedial Action Taken \*

During the closure of a 95 bbl BGT impacts were noted beneath BGT. An initial investigation was begun and impacts were discovered at 12 feet below the surface. Samples were collected at both 5 and 12 feet below surface and were sent to the laboratory for analysis. Initial OVM field readings indicated a reading of 1814 ppm at 5 feet and a reading of 1873 ppm at 12 feet below surface. The impacts will be remediated in accordance with the regulations as stated in the NMAC.

Describe Area Affected and Cleanup Action Taken.\*

The area is currently awaiting further investigation and laboratory analysis results before final clean-up is initiated. An initial field report and pictures are included with this release notification.

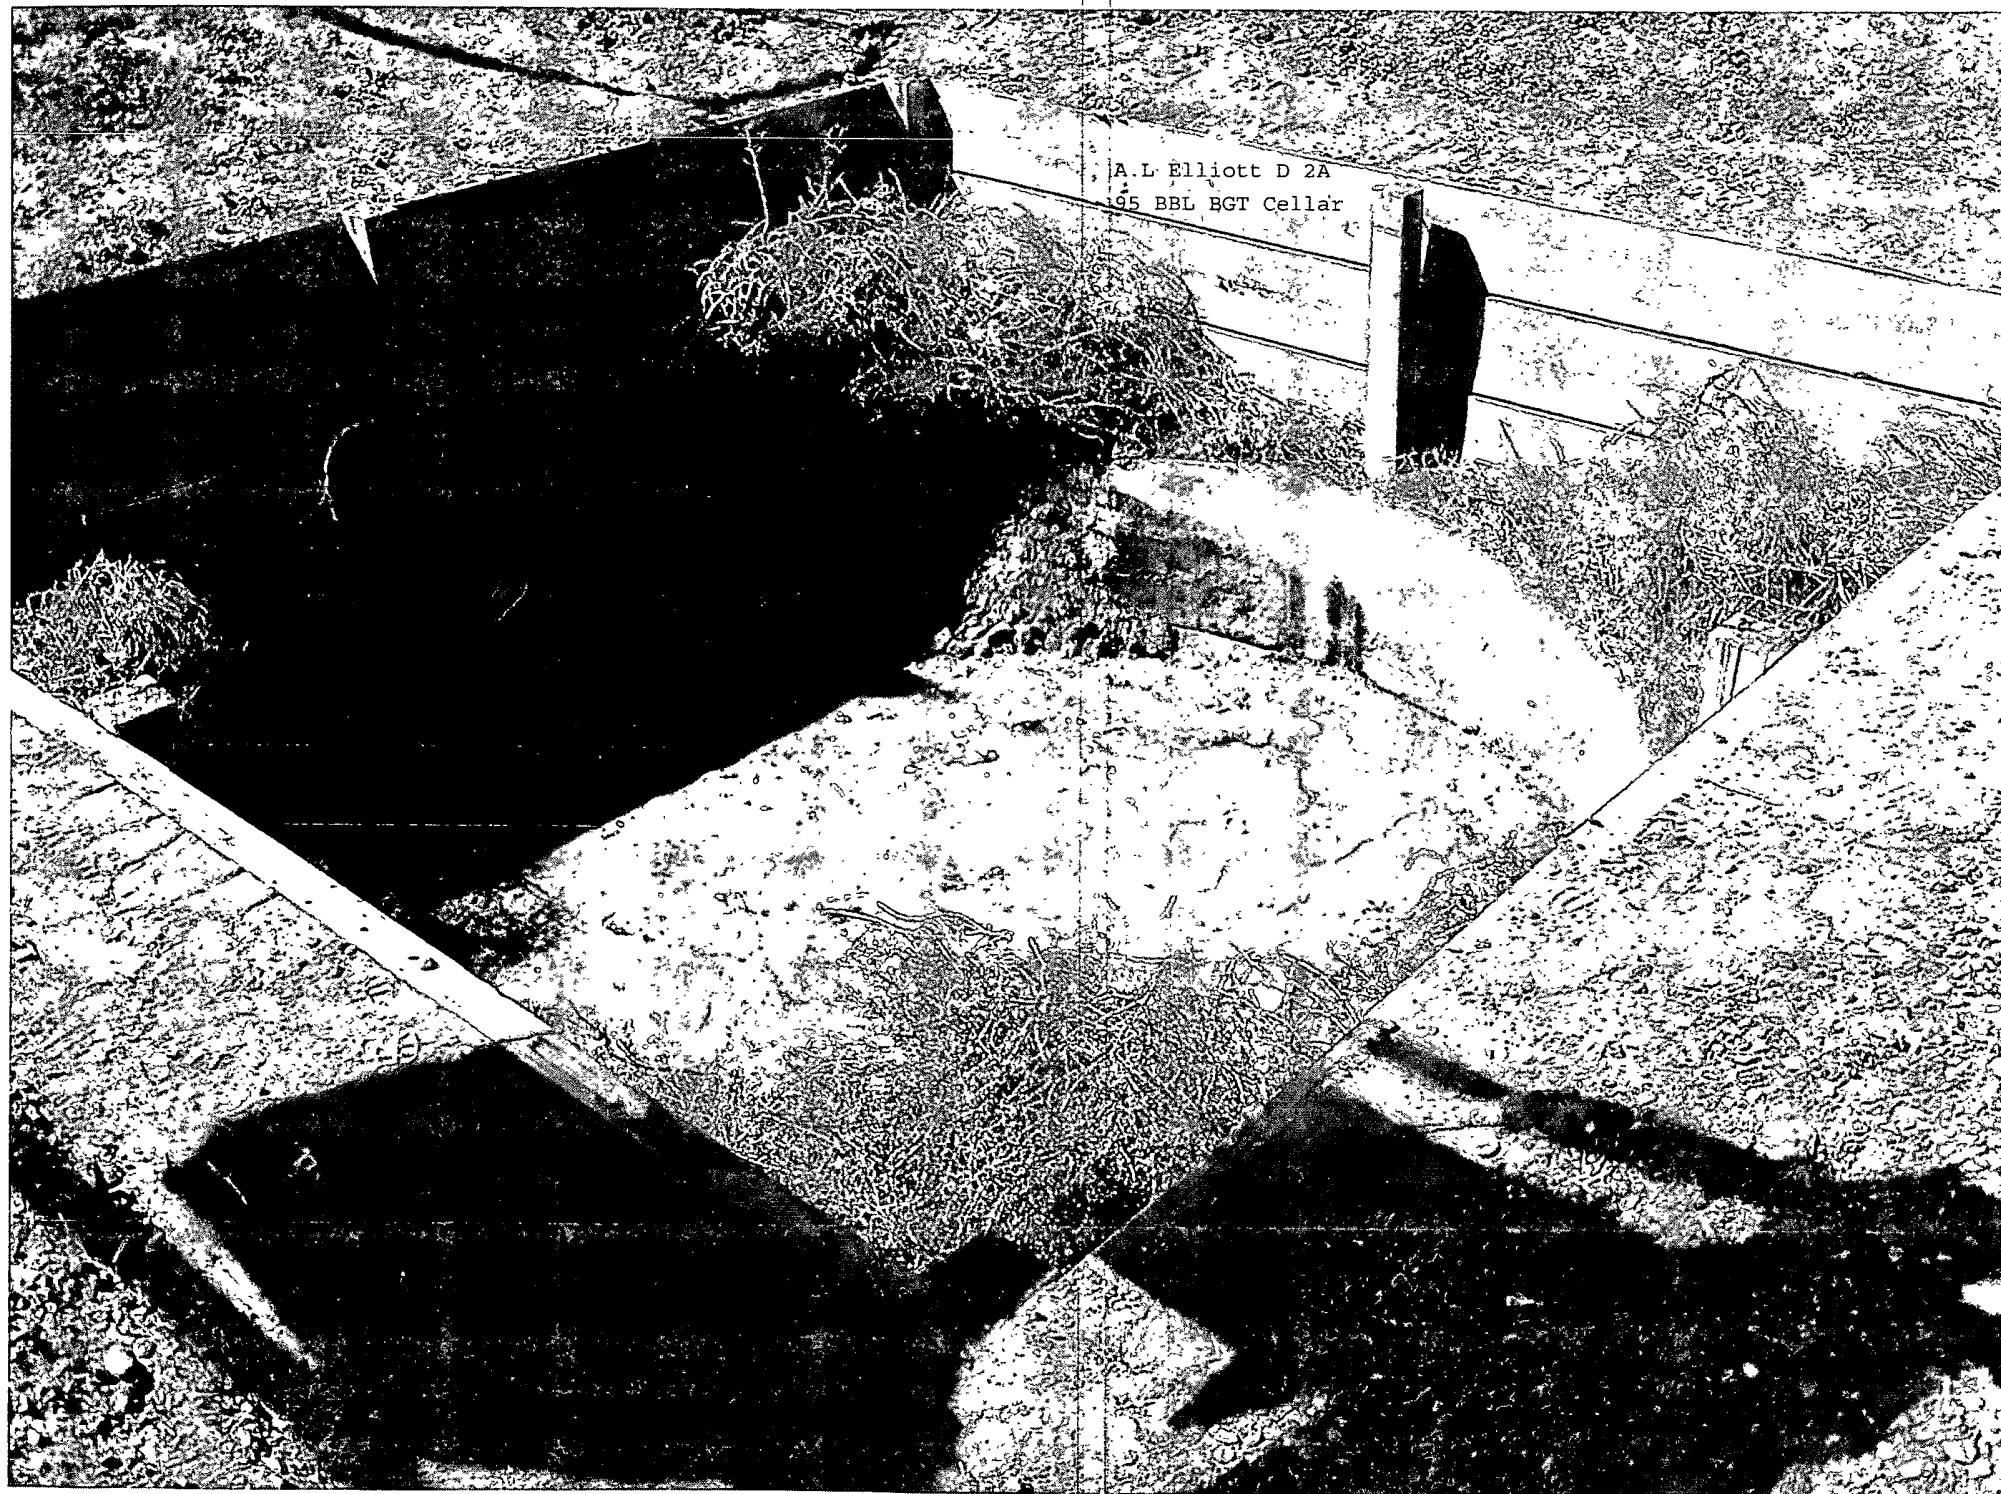

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
