NATURE OF RELEASE

Type of Release: Condensate	Volume of Release: 129 bbls.	Volume Recovered: 35 bbls.
Source of Release: Condensate Storage Tank	Date and Hour of Occurrence: 11/1/2000	Date and Hour of Discovery: 11/1/2000 4:30:00 PM
Was Immediate Notice Given? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If Yes, To Whom? Denny Foust	
By Whom? Ed Hasely	Date and Hour: 11/2/2000 8:30:00 AM	
Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse. 0	

If a Watercourse was Impacted, Describe Fully. (Attach Additional Sheets If Necessary)

NA

Describe Cause of Problem and Remedial Action Taken. (Attach Additional Sheets If Necessary)

A hole in the bottom of the tank allowed the condensate to drain out of the storage tank into the area inside the tank berm. The free liquids were vacuumed up and put into a new storage tank.

Describe Area Affected and Cleanup Action Taken. (Attach Additional Sheets If Necessary)

All fluids were contained inside the tank berms. The storage tank was moved and approximately 400 cy of impacted soils were excavated and landfarmed onsite and the Grenier #4 location.

SEE ATTACHED

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Summary of Events Grenier #14

11/1/2000 – Tank leak discovered on condensate tank at the Grenier #14.

11/2/2000 – Spill reported to the NMOCD and BLM.

11/6/2000 – Condensate tank was removed and impacted soils were excavated to approximately two feet. Impacted soils were landfarmed on location.

11/14/2000 – A soil boring was conducted in the area of the spill. Impacted soils were discovered at a depth of five feet (PID reading over 1000 ppm) down to a depth of ten feet (PID reading of 150 ppm).

11/30/2000 – Additional excavation took place. Final excavation size approximately 30 feet by 30 feet by 12 feet deep. Samples from the excavation walls and bottom were still not less than 100 ppm on the PID, but the “core” of the contamination was removed. Most of the impacted soils were landfarmed on location.

Ongoing - Some soils are currently stockpiled on location, but will be trucked to the Grenier #4 for landfarming. The excavation will be left open for a few days, then will be backfilled with clean soils.
