If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
ConocoPhillips well technician found water in the containment berm around the tanks and called BP. BP personnel closed a valve that was leaking through a bull plug that had cracked due to freezing. Water truck recovered 17 bbl of water from within the containment berm. Remaining water that had been released had soaked into the soil. The bull plug and valve were replaced.

Describe Area Affected and Cleanup Action Taken.*
A water truck was used to recover standing water in the bermed area. The remainder of the released water soaked into the soil.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
