#### Plug and Abandon Procedure

**AFE Number:** 

1401619 (FC), 1401620 (PC)

**Spud Date:** 

11/24/2002

**Surface Casing:** 

7", 20#, J-55 csg @ 130'. Cmt'd w/50 sx. Circ 2 bbls to surf.

**Production Casing:** 

4-1/2", 10.5#, J-55 csg @ 1,301'. Cmt'd w/165 sx. Circ 10 bbls cmt to surf.

Capacity: .0159 bbls/ft or .6699 gal/ft

**Production Tubing:** 

Yes

**Rod String:** 

Yes

Pump:

2-1/4" tubing pump w/on-off tl

**Perforations:** 

Fruitland Coal: 1,026' - 1,136'

Pictured Cliffs: 1,150' – 1,153'

PBTD:

1,279'

**Recent Production:** 

INA since 7/25/2012. 10 mcfpd, 3 bwpd.

\*Notify NMOCD & BLM 24 hours prior to beginning plugging operations\*

- 1. Check for COA's and approved NOI before beginning operations.
- 2. Test rig anchors.
- 3. Set flowback tank.
- 4. MIRU completion rig. Review JSA.
- 5. Kill well.
- 6. Unlatch on-off tool. TOH & LD rods.
- 7. ND WH. NU & FT BOP.
- 8. TOH tubing & pump.
- 9. TIH 3-7/8" bit & 3-7/8" string mill to 1,026'. TOH.

- 10. TIH 4-1/2" CR and set @  $\pm 976$ '. PT tubing. Sting out of CR and circulate hole clean.
- 11. PT casing and CR to 550 psig. If casing does not test, contact engineer.
- 12. MIRU cement truck. Review JSA.

706

- 13. **Perforation Isolation & Fruitland Coal Top Plug (976' 860'):** Pump 18' sx Class "B" cement (15.6 ppg, 1.18 cuft/sx yield) down tubing and spot a balanced plug from 976' 860' (volume calculated with 50' excess).
- 14. **Surface Plug (180' Surface):** Pump 20 sx Class "B" cement (15.6 ppg, 1.18 cuft/sx yield) down tubing and spot a balanced plug from 180' Surface (volume calculated with 50' excess).
- 15. TOH & LD tubing.
- 16. RDMO cement truck.
- 17. WOC 4 hours.
- 18. Cut off WH. Fill in casing as needed with cement. Install above ground P&A marker.
- 19. Cut off anchors and reclaim location.

#### Checklist

#### Regulatory:

- 1. NOI to P&A on form C-103 & 3160-5
- 2. Submit a post-work sundry on form C-103 & 3160-5 which details the P&A work and location work within 30 days of completing all required restoration work.

#### Equipment:

- 1. 1 flowback tank
- 2. If tbg doesn't PT, 1,025' 2-3/8" workstring
- 3. 35 sx Class "B" cement
- 4. 1 above ground marker

#### Services:

- 1. Completion rig
- 2. Cement truck

### Proposed P&A Diagram

## P&A Reclamation Plan 1/30/2014

**ROOSEVELT 2** API 30-045-31222

Lease # NMNM 20314 Lat: 36.79757, Long: -108.30272

Footage: 1,980' FSL 825' FWL Sec.22L, T30N, R14W San Juan County, NM

#### 1.0 PURPOSE and SCOPE

1.1) The purpose of this document is to ensure final reclamation of associated pad and access road(s) as required by applicable laws and regulations. Properly performed reclamation procedures are required to preserve Private, Public, Tribal and National Forest lands, mitigating any possible environmental/surface owner issues that could potentially arise. This reclamation plan is designed to provide environmentally sound, safe, prudent and specific guidelines, while implementing Best Management Practices, to assist in returning disturbed soils to a level consistent with the surrounding topography prior to the approved disturbance.

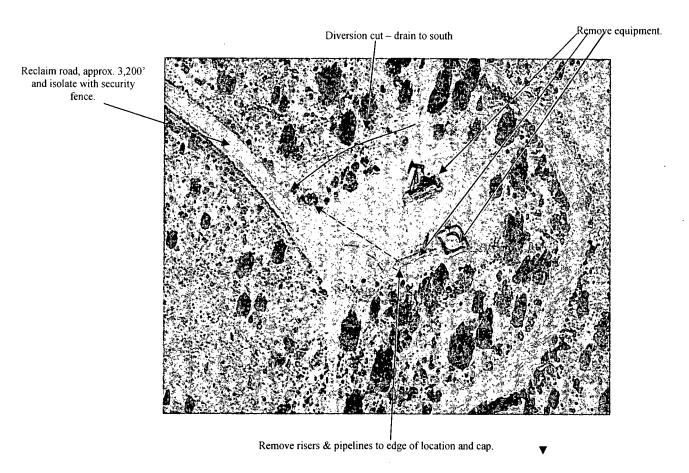

#### 2.0 PRE-RECLAMATION SITE INSPECTION

2.1) A pre-reclamation site inspection with BLM Farmington Field Office (FFO) Authorized Officer (AO) *Randy McKee* and XTO Energy, Inc. representatives *Brent Beaty & Luke McCollum* took place on 1/30/2014, prior to implementation of the reclamation process to determine contours, silt trap placement; seed mix selection, weed abatement procedures as well as additional requirements needed to assist in returning the area to applicable pre-disturbance condition.

#### 3.0 PROCEDURES

3.1) Rehabilitation work will be completed within one year from plug date. No new disturbance will be allowed outside current disturbed areas to be reclaimed. Notifications, as stipulated in the APD, will be provided to proper authorities via sundry notifications, e-mail, or phone within required time frames.

**3.2**) All fences, production equipment, purchaser's equipment, concrete slabs, anchors, flow lines (above ground and/or subterranean), risers (*Riser and pipe to be removed north west side of location and capped.*), debris, and trash will be removed from location and disposed of at approved facilities.

- **3.3)** *Production pits* will be closed and remediated according to Federal, State, and Local guidelines. Proper notifications will be made according to above regulations as required. Impacted soil discovered during reclamation activities will be remediated and disposed of at an approved waste facility according to above mentioned guidelines and regulations.
- **3.4**) Available top soil, typically the top 6", will be stockpiled during reclamation procedures with the top soil being redistributed after completion of earthwork to assist in achieving adequate vegetation growth.
- **3.5**) *Gravel* on location will be removed and/or may be placed/buried in cut areas to assist in contouring or, with AO approval, used on surrounding lease roads for road stabilization. (*Gravel will be buried on location as determined during onsite inspection*.)
- 3.6) Disturbed areas will be returned (as close as possible), weather permitting, to predisturbance topography. (A silt trap will be constructed on West section of reclamation to assist

• a b •

in drainage and erosion control as determined during onsite). The removal of sharp angular corners and redefinition of natural drainage will be priority allowing for additional contouring, as needed, to aid in erosion control. (A diversion ditch will be cut on the North side of reclamation with southern drainage). Reclaimed areas will be ripped to depths of a minimum of 12" (inches), leaving the surface as rough as necessary, to provide sufficient root establishment, growth, and stabilization of disturbed areas.

- 3.7) Access roads not required will be reshaped, reclaimed and contoured as close as possible to surrounding area. Top soil, typically the top 6", preserved during reclamation procedures will be pulled up and redistributed after completion of earthwork to assist in achieving adequate vegetation growth
- 3.8) Seeding will be accomplished, following proper agency notifications, with recommended procedures. Appropriate certified weed free seed mixes (determined during onsite inspection) will be used. The Badlands community was identified with Fourwing saltbush (Atriplex canescens) @ 4.0 PLS/acre, Shadscale (Atriplex confertifolia) @ 2.0 PLS/acre, Indian ricegrass (Achnatherum hymenoides) @ 5.0 PLS/acre, Alkali sacaton (Sporobolus airoides) @ 0.25 PLS/acre, Galleta (Pleuraphis jamesii) @ 4.0 PLS/acre, Blue grama (Bouteloua gracilis) @ 2.0 PLS/acre and Small flower globemallow(Sphaeralcea parvifolia) @ 0.25 PLS/acre being chosen during onsite as preferred seed mix for this location. Seed will be distributed via appropriate methods as dictated by topography of reclaimed areas. Additional methods, as dictated by reclaimed topography, may be utilized to control runoff and assist in established growth.
- 3.9) Fencing, signage, and other deterrents will be installed when deemed necessary to discourage travel on reclaimed areas. (A security fence will be constructed at reclaimed access road entrance to isolate traffic).

#### 4.0 ARCHAEOLOGICAL CONCERNS

- **4.1**) Any disturbance activity outside approved areas will require additional BLM approval and may require an additional survey.
- **4.2**) All employees will be educated on the importance of cultural site preservation and legalities of disturbing cultural sites.
- **4.3**) If any cultural sensitive areas are unearthed during the reclamation process work will be immediately suspended with the incident reported to the BLM. The BLM will then notify XTO how to proceed.

#### 5.0 THREATENED AND ENDANGERED SPECIES (T&E)

**5.1**) If any T&E not previously surveyed are discovered during reclamation activities work will be immediately suspended and the BLM T&E Specialist will be promptly notified.

#### 6.0 WILDLIFE RESTRICTIONS

**6.1**) Closures and restrictions specified in the APD, if applicable, will be strictly adhered to.

#### 7.0 PALEONTOLOGY

7.1) Unknown paleontology discoveries during the reclamation process will immediately halt activities and the BLM AO will be notified. XTO will standby for further instructions.

#### 8.0 ABANDONMENT MARKER

**8.1**) Required marker as specified by the BLM will be installed.

#### 9.0 WEED MANAGEMENT

9.1) Use of approved pesticides/herbicides shall be according to applicable Federal, State, Tribal and local laws. Management of Invasive and Noxious Weeds, as listed on the BLM Noxious and Invasive list, will be dealt with in a prompt and environmentally safe manner. Noxious or invasive weeds will be eradicated using pesticides/herbicides appropriate for the type of weed found and seed mixes used on reclaimed areas. Pesticide/herbicide use shall be approved by BLM Specialist prior to application. Emergency pesticide/herbicide use shall be approved by BLM Specialist prior to application. Proper authorities will be notified at times specified by BLM with required information regarding pesticide use plans (PUPs), spraying procedures and types of weeds found. (No noxious or invasive weeds were identified during onsite. Monitoring will continue during life of project as required by laws, rules and regulations).

#### 10.0 MONITORING

10.1) After attaining reclamation approval FFO and operator will establish a *line point intercept transect* for the achievement of *required growth percentages with relation to chosen plant communities*. Growth monitoring will be conducted and recorded as required until appropriate growth is accomplished. Vegetative cover will be accomplished when growth has reached amounts equal to those required for specific well locations and appropriate procedures.

# UNITED STATES DEPARTMENT OF THE INTERIOR BUREAU OF LAND MANAGEMENT FARMINGTON DISTRICT OFFICE

6251 COLLEGE BLVD. FARMINGTON, NEW MEXICO 87402

Attachment to notice of Intention to Abandon:

Re: Permanent Abandonment

Well: 2 Roosevelt

#### CONDITIONS OF APPROVAL

- 1. Plugging operations authorized are subject to the attached "General Requirements for Permanent Abandonment of Wells on Federal and Indian Lease."
- 2. Farmington Office is to be notified at least 24 hours before the plugging operations commence (505) 564-7750.
- 3. The following modifications to your plugging program are to be made:
- a) Bring the top of the Fruitland top to 706'.
- b) High H2S has been encountered in the area, therefore you are required to have H2S personal and equipment on location during plugging operations.

You are also required to place cement excesses per 4.2 and 4.4 of the attached General Requirements.

Office Hours: 7:45 a.m. to 4:30 p.m.
