13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

McElvain Energy has elected to attempt a casing repair on the Ora #6 well. Currently the well has casing leaks from 2195 to 2270 and the DV tool at 3737 is leaking. Casing will be swedged out accommodate casing patches. Two casing patches will be run, the first one will be run on wireline across the DV tool and the second will be run on tubing across the casing leaks. An MIT of the casing from 6867 (sand, plug back depth) to surface will be run holding 500 psi for 30 min. The sand plug from 6867 to 8081 will be circulated out with air foam. Tubing will be run and set at +/- 7900 and the well be returned to production as a Gallup Dakota producer. Operations will commence once McElvain has received partner approval.

- Provide charted MIT results along with the subsequent Report of Operations. IF MIT fails, contact this office prior to returning this well to production.

Notify NMOCD 24 hrs prior to beginning operations
