COMMENCE DRILLING OPNS. ☐ PLUG AND ABANDONMENT ☐
CASING TEST AND CEMENT JOB ☐
OTHER: ☐

12. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent date, including estimated date of starting any proposed work) SEE RULE 1103.

Benson-Montin-Greer Drilling plans to run a CBL from PBTD @ 7850" to approximately 6900' (base of existing Mancos perforations are at 6868'). Pressure test 5-1/2" casing, spot 7-1/2% HCL and perforate the Dakota intervals 7641' - 7647', 7690' - 7694', 7710' - 7720' and 7750' - 7764'. Each perforated interval will be broken down separately and then all zones fracture stimulated with 81,000 gallon AmborMax 1015 plus 150,000 # sand. The well will be cleaned out and the productivity of the Dakota Zones production tested. If the zone is productive, Benson-Montin-Greer Drilling will apply for downhole commingling of the Mancos and Dakota Zones.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
