13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

ConocoPhillips requests allocation on this well as per attached. This is in reference to DHC#1636AZ.

NMOC

Allocation for the San Juan 28-7 Unit #188F (API 30-039-27297)

The San Juan 28-7 Unit #188F is an 80-acre Mesaverde/80-acre Dakota infill well located in the southwest quarter of Section 4-T27N-R7W, Rio Arriba County, NM. The well was TD'd in June 2005, perforated & fracture stimulated in July 2005, and ready for first delivery on September 7, 2005.

Initial flow tests as reported by the field operator indicated:

Mesaverde (2-3/8" tubing at 5,507', perfs 4,935-5,575' OA, composite plug at 5,675')

8/31/05 1/2" choke 290 psi ftp 570 psi sicp 1,914 MCFPD + 1 BOPD + 2 BWPD

Dakota (2-3/8" tubing set at 7,439', perfs 7,555-7,747' OA, PBTD 7,785' Sj MD, multi-pass production log)

9/7/05 1/2" choke 190 psi ftp 629 psi sicp 789* MCFPD + 0 BOPD + 5.25 BWPD

Based on these initial stabilized flow tests, calculated DHC allocation percentages are:

Fixed Allocation (Gas)	Mesaverde	71%
	Dakota	29%

Fixed Allocation (Oil)	Mesaverde	71%
	Dakota	29%

Little oil was produced during the tests. Based on production data from offset wells, Dakota and Mesaverde are expected to produce with similar gas to condensate ratios. Therefore oil production is allocated using the same percentage as for gas production.

Please allocate production based on the above estimated percentages.

Call with questions

Tom Johnson
832-486-2347

*Rate measured with a production log, making multiple passes at varying speeds. Casing was shut-in, with all production directed up tubing. Tubing set ~100' above the top Dakota perforation makes it possible to gauge a Dakota rate isolated from any Mesaverde influence (log run below the point where the shallower Mesaverde has already turned the corner and is going up tubing).
