NATURE OF RELEASE

Type of Release: Oil/condensate	Volume of Release: unknown	Volume Recovered: none
Source of Release: Unknown – Discovered during BGT closure; likely earthen pit.	Date and Hour of Occurrence: unknown	Date and Hour of Discovery: February 2, 2014
Was Immediate Notice Given?	If YES, To Whom?	
<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Not Required		
By Whom?	Date and Hour	
Was a Watercourse Reached?	If YES, Volume Impacting the Watercourse.	
<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.* Soil impacts were found during the closure of a 95 bbl BGT. BGT did not have an obvious signs of failed integrity. Existing groundwater monitoring wells were sampled to determine presence of impacts; none groundwater impacts found. An extensive excavation of impacted soils removed approximately 17,000 square feet were excavated and transported off site for landfarm treatment. Additional groundwater monitoring wells were installed to determine impacts. No additional impacts were found.

Describe Area Affected and Cleanup Action Taken.* Approximately 17,000 square feet of soil was excavated and removed from the site for offsite landfarm treatment. The area of excavation measured approximately 150' x 120' x 4' impact thickness with a total of approximately 2,700 cubic yards removed. The extents of impacted soils were determined and removed from the site. Laboratory results are attached. Groundwater impacts were suspected. Monitoring wells were installed, purged and sampled. Results of the laboratory analysis of the groundwater samples determined insignificant impacts to groundwater below groundwater quality standards. Laboratory results are attached.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

BP AMERICA PRODUCTION COMPANY

REMEDIATION OF UNIDENTIFIED SOURCE(S)

GCU Com I 181

API #: 30-045-07707

Legal Description: (Unit Letter F, Sec. 34 -T29N -R12W, NMPM)

CHRONOLOGICAL EVENT SUMMATION

1. **February 6, 2014:** BP begins closure of 95 bbl below-grade tank (BGT) at site. Apparent soil impacts discovered during removal process. BGT did not appear to have lost integrity, therefore, source of release was undetermined. Groundwater observed approximately six (6) feet below grade (B.G.).
2. **November 4, 2014:** Groundwater sample collected from pre-existing monitor well MW-A (same as MW #36) and analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX) per US EPA Method 8021B. All constituents tested as not detected (ND) at the reporting limit (RL) noted on the Laboratory Analytical Report. *See following tables for all field and/or lab results collected from this point forward.*
3. **November 11, 2014:** Groundwater samples collected from other pre-existing monitor wells for BTEX (MW #5, #7R, #32R, and #47). All sample constituents test ND except MW #32R (benzene – 1.3 microgram per liter or µg/L).
4. **February 23, 2015:** BP begins remediation via excavation with trackhoe. One (1) soil sample from the impacted soil area was collected.
5. **February 26, 2015:** 2nd sampling event conducted. Three (3) soil samples were collected.
6. **March 4, 2015:** 3rd sampling event conducted. Two (2) soil samples were collected.
7. **March 5, 2015:** 4th sampling event conducted. Two (2) soil samples were collected.
8. **March 6, 2015:** 5th sampling event conducted. One (1) soil samples were collected.
9. **March 9, 2015:** 6th sampling event conducted. Four (4) soil samples were collected.
10. **March 13, 2015:** 7th sampling event conducted. Three (3) soil samples were collected with two (2) separate Chain-of-Custody Records submitted.
11. **March 19, 2015:** 8th and final soil sampling event conducted. Excavation dimensions measured approximately 150 ft. X 120 ft. X 4 ft. (average impact thickness). Approximately 2,700 cubic yards were removed and transported to BP's Crouch Mesa Facility.
12. **March 20, 2015:** Upon receiving preliminary lab results from previous day's sampling event, backfilling commenced with clean, non-wasting fill material/soil.
13. **April 29, 2015:** Water sample collected from nearby pond (Nunez Private Pond) and analyzed for BTEX only. All constituents test ND.
14. **June 3, 2015:** Two (2) groundwater monitor wells MW #101 (close proximity to BGT foot print area) and MW #102 (in suspected down gradient position) were installed using CME-95 mobile drill rig (see following aerial map and Bore / Test Hole Reports).

15. **June 24, 2015:** Development/purging of both monitor wells MW #101 and MW #102 was initially conducted to 1) eliminate sediment accumulation during the installation process, and 2) determine/observe rudimentary recovery rates.
16. **June 25, 2015:** Completed sampling of monitor wells MW #101, MW #102, and relinquished to a laboratory representative that same day. The samples were later analyzed for BTEX per US EPA Method 8021B and for anion/cation balance per US EPA Method 300.1. All BTEX constituents were ND at the laboratory RL. The fluoride, chloride, and nitrate levels were below the allowable concentration standard established by the New Mexico Water Quality Control Commission.
17. **November 6, 2015:** Sampled on-site low profile above-grade disposal tank produced water from GCU Com H 180E (API #: 3004524869, unit letter N, Section 28, T29N, R12W) to evaluate the sulfate and TDS from same gas producing formation [Dakota (DK)]. Test results indicate that elevated levels recorded in monitor wells MW #101 and MW #102 do not appear to be from the gas production formation water and most likely are naturally occurring.

Sample Log-In Check List

Client Name: BLAGG

Work Order Number: 1503348

RcptNo: 1

Received by/date: CJS 03/10/15

Logged By: Anne Thorne 3/9/2015 8:25:00 AM *Anne Thorne*

Completed By: Anne Thorne 3/10/2015 *Anne Thorne*

Reviewed By: *JH* 03/10/15

Chain of Custody

1. Custody seals intact on sample bottles? Yes No Not Present
2. Is Chain of Custody complete? Yes No Not Present
3. How was the sample delivered? Courier

Log In

4. Was an attempt made to cool the samples? Yes No NA
5. Were all samples received at a temperature of >0° C to 6.0°C Yes No NA
6. Sample(s) in proper container(s)? Yes No
7. Sufficient sample volume for indicated test(s)? Yes No
8. Are samples (except VOA and ONG) properly preserved? Yes No
9. Was preservative added to bottles? Yes No NA
10. VOA vials have zero headspace? Yes No No VOA Vials
11. Were any sample containers received broken? Yes No
12. Does paperwork match bottle labels?
(Note discrepancies on chain of custody) Yes No
13. Are matrices correctly identified on Chain of Custody? Yes No
14. Is it clear what analyses were requested? Yes No
15. Were all holding times able to be met?
(If no, notify customer for authorization.) Yes No

of preserved bottles checked for pH:
<2 or >12 unless noted)
Adjusted?
Checked by:

Special Handling (if applicable)

16. Was client notified of all discrepancies with this order? Yes No NA
