Dept	District #3	HWEST NEWMEXICO P	ACKER LEAKAGE	TEST INSTRUCTION	N.S.			
 A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. 			for Flow Te	6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.				
Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when				in while the zone which wa	is previously snut-in is produced.			
requested by the Division.	in also be taken at any time that could				be measured on each zone with a deadweight pressure gauge at time ediately prior to the beginning of each flow period, at fifteen-minute			
	encement of any packer leakage test, t		immediately	prior to the conclusion of	nd at hourly intervals thereafter, including one pressure measurement each flow period. 7-day tests: immediately prior to the beginning of each			
Division in writing of the exact time the t	est is to be commenced. Offset operat	ors shall also be so notified.	to the conclu		ch flow period (at approximately the midway point) and immediately prior Other pressures may be taken as desired, or may be requested on wells ble test data			
3 The nacker leakage test shall comm	ence when both zones of the dual com	letion are shut-in for pressure	24-hou	r oil zone tests: all pressure	es, throughout the entire test, shall be continuously measured and recorded uracy of which must be checked at least twice, once at the beginning and			
 The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days. 			once at the e	once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required				
			above being	taken on the gas zone.				
 For Flow Test No. 1, one zone of the while the other zone remains shut-in. Su 24 hours in the case of an oil well. Note: 	ch test shall be continued for seven day	s in the case of a gas well and for		sults of the above-described	t tests shall be filed in triplicate within 15 days after completion of the			
atmosphere due to lack of a pipeline com			test. Tests s	shall be filed with the Aztec	District Office of the New Mexico Oil Conservation Division on ge Test Form Revised 10-01-78 with all deadweight pressures indicated			
					ures (gas zones only) and gravity and GOR (oil zones only).			
 Following completion of Flow Test above. 	No. 1, the well shall again be shut-in, i	n accordance with Paragraph 3
