	<input type="checkbox"/> Convert to Injection	<input type="checkbox"/> Plug Back	<input type="checkbox"/> Water Disposal	

13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recomple in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

Enduring Resources, LLC is requesting to expand their existing permanent facility area on the N Escavada Unit 315H, 316H, 330H, 331H well pad per the attached diagram. This well pad also serves as a remote facility to the N Escavada Unit 317H and 318H wells hosted on a separate location. A site visit was conducted on May 10, 2018 with Randy McKee to discuss facility expansion and related dirt work components required to accommodate interim reclamation at a later date. A brief summary of the facility changes to be made are listed below:

- Expand the pipe paneled area north of the containment an additional 30 feet north and 20 feet east. This will result in the paneled area being approximately 80 feet by 115 feet and a total facility area of 330 feet by 115 feet. This additional area will host an MCC building, three capstones, two compressors and other minor facility components and above ground appurtenances. Please see attached diagram.
- As a result of the facility expansion, the access road entering location would be shifted easterly to enter the location in front of the expanded facility area.
- The existing resource road adjacent to the well pad near the northwestern corner would be shifted approximately 12 feet north away from the fill slope of the well pad to allow for 3:1 interim reclamation of the slope at a later date.
- An existing culvert in the section of aforementioned resource road being moved, will be reset to accommodate the road change.

14. I hereby certify that the foregoing is true and correct. Name (Printed/Typed)
Andrea Felix
