☒ Other - Change in Operations Plan

13. Describe Proposed or Completed Operations

It is intended to change the operations plan on the above referenced well from a Basin Fruitland Coal to a deepening into the Pictured Cliffs formation. The well is located in an area of localized very low permeability, and in an attempt to recover some gas from this wellbore, we propose to cement the casing and fracture stimulate the well. Before running casing, we would like to drill an additional 100 feet into the Pictured Cliffs formation (this well has previous sump approval and has already been drilled 58 foot below the PC top) for a potential PC completion. We have contacted interest owners in both horizons & they have given us verbal approval for PC completion. This location is adjacent to, but not included in the La Jara Pictured Pool.

Verbal approval was granted by Jim Lovato 3/15/06 by email to deepen and complete as proposed above. If cement fails to circ to surface, as temperature survey or CBL will be required. Minimum overlap for cmt coverage is 100' into the 7" casing. Notification will be sent to J. Lovato if program changes.

14. I hereby certify that the foregoing is true and correct.
