## SUNDRY NOTICES AND REPORTS ON WELLS

Do not use this form for proposals to drill or to re-enter an abandoned well. Use Form 3160-3 (APD) for such proposals.

SUBMIT IN TRIPLICATE - Other instructions on reverse side.

1. Type of Well  
☐ Oil Well ☒ Gas Well ☐ Other2. Name of Operator  
ConocoPhillips Co.3a. Address  
P.O. Box 2197, WL3-6085 Houston Tx 772523b. Phone No. (include area code)  
(832)486-24634. Location of Well (Footage, Sec., T., R., M., or Survey Description)  
Sec 12 T27N R7W SWNW 2445FNL 115FWL

5. Lease Serial No.

NMSF079298-B

6. If Indian, Allottee or Tribe Name

7. If Unit or CA/Agreement, Name and/or No.

8. Well Name and No.

San Juan 28-7 Unit #125F

9. API Well No.

30-039-27062

10. Field and Pool, or Exploratory Area

Blanco Mesverde/Basin Dakota

11. County or Parish, State

Rio Arriba

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

ConocoPhillips requests allocation for this well as per attached. This is in reference to DHC#2046AZ.

14. I hereby certify that the foregoing is true and correct

**Allocation for the San Juan 28-7 Unit #125F (API 30-039-27062)**

The San Juan 28-7 Unit #125F is an 80-acre Mesaverde/80-acre Dakota infill well located in the northwest quarter of Section 12-T27N-R7W, Rio Arriba County, NM. The well was TD'd in January 2006, perforated & fracture stimulated in February 2006, and ready for first delivery on March 23, 2006.

Initial flow tests as reported by the field operator indicated:

Mesaverde (2-3/8" tubing at 5,409', perfs 4,804-5,524' OA, composite plug at 5,550')

3/15/06    1/2" choke    200 psi ftp    345 psi sicp    1,320 MCFPD + 0 BOPD + 5 BWD

Dakota (2-3/8" tubing set at 7,344', perfs 7,432-7,566' OA, PBTD 7,660' MD, multi-pass production log)

3/21/06    1/2" choke    325 psi ftp    640 psi sicp    1,988\* MCFPD + 0 BOPD + 2.9 BWPD

Based on these initial stabilized flow tests, calculated DHC allocation percentages are:

<b>Fixed Allocation (Gas)</b>	<b>Mesaverde</b>	<b>40%</b>
	<b>Dakota</b>	<b>60%</b>

<b>Fixed Allocation (Oil)</b>	<b>Mesaverde</b>	<b>40%</b>
	<b>Dakota</b>	<b>60%</b>

No oil was produced during the tests. Based on production data from offset wells, Dakota and Mesaverde are expected to produce with similar gas to condensate ratios. Therefore oil production is allocated using the same percentage as for gas production.

Please allocate production based on the above estimated percentages.

Call with questions

Tom Johnson  
832-486-2347

\*Rate measured with a production log, making multiple passes at varying speeds. Casing was shut-in, with all production directed up tubing. Tubing set ~100' above the top Dakota perforation makes it possible to gauge a Dakota rate isolated from any Mesaverde influence (log run below the point where the shallower Mesaverde has already turned the corner and is going up tubing).
