13. Describe Proposed or Completed Operations (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once Testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

"This is part of the Permit Clean-up program for Black Hills."

BLACK HILLS requests administrative approval to downhole commingle the East Blanco Pictured Cliffs (72400) & Basin Fruitland Coal (71629).

Both intervals have common ownership & produce essentially dry gas. We have not experienced any significant cross flows between these two intervals, & all the fluids are compatible. Downhole commingling will improve recovery of liquids & gas, eliminate redundant surface equipment, & maximize productivity. Notice has been filed concurrently on form C-107A with the State.

These Gas & Oil allocations are based on tests taken during rig operations in July 2005, in which the FRTC flowed 200 MCF/D & the FRTC & PC together flowed 1032 MCF/D. See attached calculations. This FRTC pool does not produce oil.

GAS:	Pictured Cliffs	81%	OIL:	Pictured Cliffs	100%

OIL

The Basin Fruitland Coal gas pool does not make any oil in the vicinity of the subject well. The East Blanco Pictured Cliffs gas pool does produce a little oil. Therefore, any and all oil will be assigned to the Pictured Cliffs.

GAS

During completion operations in June & July 2005, stabilized gas tests were taken on the FRTC alone, then on the FRTC & PC together.

Orifice well tester (1") on FRTC alone for 24 hours (7/7/05): 200 MCF/D.

The Pictured Cliffs & FRTC choke test (together) stabilized at 150 psi on a ½" choke for a 24 hour period on 7/13/05.

$Q = .0555 * C * P$ $C = \text{coefficient for } \frac{1}{2}" \text{ choke} = 112.72$
 $P = \text{gauge pressure} + 15 \text{ psi} = 165 \text{ psi.}$

$Q = .0555 * 112.72 * 165 = 1032 \text{ MCF/D.}$

Total gas = 1032 MCF/D.

Gas from PC only = $1032 - 200 = 832 \text{ MCF/D}$

% Pictured Cliffs = $\frac{832}{1032} = 81\%$

% FRTC = $\frac{200}{1032} = 19\%$
