SUNDRY NOTICES AND REPORTS ON WELLS

Do not use this form for proposals to drill or to re-enter an abandoned well. Use Form 3160-3 (APD) for such proposals.

SUBMIT IN TRIPLICATE - Other instructions on reverse side.

1. Type of Well
☐ Oil Well ☒ Gas Well ☐ Other2. Name of Operator
ConocoPhillips Co.3a. Address 3b. Phone No. (include area code)
P.O. Box 2197, WL3-6085 Houston Tx 77252 (832)486-24634. Location of Well (Footage, Sec., T., R., M., or Survey Description)
Sec 20 T29N R5W NWSW 2480FSL 505FWL

5. Lease Serial No.

NMNM03188

6. If Indian, Allottee or Tribe Name

7. If Unit or CA/Agreement, Name and/or No.

8. Well Name and No.

San Juan 29-5 Unit #57G

9. API Well No.

30-039-29336

10. Field and Pool, or Exploratory Area

Blanco Mesaverde/Basin Dakota

11. County or Parish, State

Rio Arriba

NM

12. CHECK APPROPRIATE BOX(ES) TO INDICATE NATURE OF NOTICE, REPORT, OR OTHER DATA

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

ConocoPhillips requests allocation on this well as per attached. This is in reference to DHC1743AZ.

Allocation for the SAN JUAN 29-5 57G (API 300392933600)

The SAN JUAN 29-5 57G is a Mesaverde/Dakota infill well located in the SW quarter of Section 20-T29N-R5W, Rio Arriba County, NM. The well was drilled to a total depth in November 2005, perforated & fracture stimulated in December 2005, and expected to be ready for first delivery in March 2006.

Initial flow tests as reported by the field operator indicated:

Mesaverde (2-3/8" tubing set at 5739', perforations from 5456 - 5894' OA, composite plug at 5994')
1/4/06 1/2" choke 220 PSIG FTP 400 PSIG SICP 1452 MCFPD + 0.5 BOPD + 5 BWPD

Dakota (2-3/8" tubing set at 7825', perforations from 7936 - 8028' OA, PBTD 8039', multi-pass production log)
1/13/06 1/2" choke 70 PSIG FTP 450 PSIG SICP 446** MCFPD + 0 BOPD + 4.9 BWPD

Based on these initial stabilized flow tests, calculated DHC allocation percentages are:

| | | |
|-------------------------------|------------------|-------------|
| Fixed Allocation (Gas) | Mesaverde | 77% |
| | Dakota | 23% |
| Fixed Allocation (Oil) | Mesaverde | 100% |
| | Dakota | 0% |

Very little oil was produced during these tests. Based on historical production data from offset wells, the Dakota is very dry and is expected to produce no oil. Therefore, 100% of any oil production should be allocated to the Mesaverde.

Please allocate production based on the above estimated percentages and call with any questions.

Thanks
Dan Hensley
832-486-2385

** Rate measured with a production log, making multiple passes at varying speeds. Casing was shut-in with all production directed up tubing. Tubing set ~100' above the top Dakota perforation makes it possible to gauge a Dakota rate isolated from any Mesaverde influence (log run below the point where the shallower Mesaverde has already turned the corner and is going up tubing).
