13. Describe Proposed or Compelled Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

After testing Surface casing as approved at 750 psi, Koch Exploration Company, LLC requests the following testing be completed for BOP's and Casing based on anticipated downhole pressure of a maximum of 1000 psi. For 7", 23# Intermediate casing - anticipated maximum pressure of 1000 psi will be encountered. Depth of casing will be set at +/- 4250' and drilled with a minimum mud weight of 8.43 lbs/gal or .433 psi/ft, thus at TD we would have approximate mud weight of +/- 1840 lbs. We plan to test BOP's and Casing to 750 psi.

For 4 1/2" Production casing - anticipated maximum pressure of 1000 psi will be encountered. Depth of casing will be set at +/- 6500' and drilled with air. With a factor for air of .22 psi/ft, with the weight is greater than bottomhole pressure, we plan to test the BOP's to 750#, Production casing will still be tested at 70% of yield (3350 psi), but not to exceed wellhead pressure rating.

I hereby certify that the foregoing is true and correct
