Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

The APD for this well was approved on June 22, 2004, and was spudded on July 15, 2004, and given API number 30-039-27799. The well was completed on November 11, 2004 and after proceeding with getting the well online problems with the existing gathering system were encountered and eventually became plugged. The age and condition of the gathering contributed to the blockage. BIA and JOAG were contacted and a sundry was developed to tie in the well using an above ground poly pipe until a new route following the access road could be surveyed.

The well was eventually shut in for safety concerns brought forth by JOAG.

After recent conversation with BIA and JOAG a decision was made to sundry the route change for documentation and move forward with the new route.

Based on the inadequate gathering line for this area Black Hills Gas Resources is relocating the tie-in location from the west to the northeast. Attached will be the initial tie-into location and the alternate tie-in to the north east.
