sundry clarification

13. Describe Proposed or Completed Operations (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once Testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Drilled surface to 266'. Rigged up casing crew to run 7" surface pipe. Circulated on bottom and then rigged up Halliburton to pump cement. We had full returns throughout the job until the end and we only had about 1/4 of returns. We didn't get cement to surface, but we had already dropped the plug when we started losing returns. So we bumped the plug and the float didn't hold. We left valve shut and waited 8 hours then rigged up Wilson Services to run temp. survey. It showed top of cement @ 150' from top. We couldn't do a top set because there was no room between the pipe and the hole. We shot 2 holes @ 140' and then tried to circulate, but couldn't get any returns @ 600 PSI and 5.5 BPM. We mixed up 2 batches of 20 to 25% LCM in the Halliburton truck and pumped a total of 20 bbls. @ 2 BPM. We still had no returns. We mixed 50 sks. Cement and pumped that away into the holes @ 140'. Then waited for 2 hours We then did a top set as far as we could get the 1" pipe down beside the casing (est 70'-80'). Mixed and pumped another 20 sks. down beside the casing and had cement up around top of surface. We then let cement set for down beside the casing and had cement up around top of surface. BLM Inspector Cole Thompson on location.

Note: TAC on 4 1/2" csg found @ ± 200' by CBL
