13. Describe Proposed or Completed Operations (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once Testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

Black Hills plans to pull the packer & downhole commingle the existing PC and Tertiary producing intervals. The well will be pumped.

BLACK HILLS requests administrative approval to downhole commingle the East Blanco Pictured Cliffs (72400) & Burro Canyon Tertiary (97035), which are both included in the pre-approved pools established by State Division Order R-11363. Both intervals have common ownership & produce essentially dry gas. We have not experienced any significant cross flows between these two intervals, & all the fluids are compatible. Downhole commingling will improve recovery of liquids & gas, eliminate redundant surface equipment, & maximize productivity. Notice has been filed concurrently on form C-103 with the State.

These Gas & Oil allocations are based on choke tests taken during completion operations in November 2003, in which the PC averaged 177 MCF/D & the Tertiary flowed 425 MCF/D. See attached calculations. The Tertiary pool does not produce oil.

GAS: Pictured Cliffs 29%
GAS: Tertiary 71%

OIL: Pictured Cliffs 100%
OIL: Tertiary 0%

OIL

The Burro Canyon Tertiary gas pool does not make any oil in the vicinity of the subject well. The East Blanco Pictured Cliffs gas pool does produce a little oil. Therefore, any and all oil will be assigned to the Pictured Cliffs.

GAS

The initial Tertiary choke test stabilized at 425 MCF/D on a 3/8" choke for a 24 hour period on 11/30/03.

The initial Pictured Cliffs choke test stabilized at 177 MCF/D on a 3/4" choke for a 24 hour period on 11/18/03.

Total gas is $425 + 177 = 602$ MCF/D

$$\% \text{ Pictured Cliffs} = \frac{177}{602} = 29\%$$

$$\% \text{ Tertiary} = \frac{425}{602} = 71\%$$
