Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof lifthe proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones Attach the Bond under which the work will be performed or provide the Bond No on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

McElvain proposes to P&A the referenced well per the attached P&A procedure.

14 Thereby certify that the foregoing is true and correct Name (Printed/Typed)

Jim McKinney

Title Operations Engineer

PLUG AND ABANDONMENT PROCEDURE

January 3, 2008

Evans Com #1

1650' FNL and 1650' FWL, Section 21, T26N, R2W Rio Arriba County, New Mexico, API 30-039-24205 Lat: _36.470810__ N / Long: _-107.05749__W

Note: All cement volumes use 100% excess outside pipe and 50' excess inside. The stabilizing wellbore fluid will be 8.3 ppg, sufficient to balance all exposed formation pressures.

All cement will be ASTM Type III, mixed at 14.8 ppg with a 1.32 cf/sx yield.

Project will require a Pit Permit (C103) from the NMOCD.

- 1. Install and test rig anchors. Comply with all NMOCD, BLM and McElvain safety rules and regulations. Conduct safety meeting for all personnel on location. MOL and RU daylight pulling unit. NU relief line and blow well down; kill with water as necessary. ND wellhead and NU BOP and stripping head; test BOP.
- PU on tubing and release pump. Reseat pump. Pressure test tubing to 1000 PSI. TOH and LD rods and pump. TOH and tally 2.375" tubing, total 3981', TAC, SN. Visually inspect tubing and if necessary use a workstring. Round trip a 5.5" casing scraper to 3694'.
- 3. Plug #1 (Pictured Cliffs interval and Frutiland, Kirtland and Ojo Alamo tops, 3694' 3351'): TIH and set a 5.5" CR at 3694' Load the casing with water and circulate well clean. Pressure test casing to 800#. If casing does not test, spot or tag subsequent plugs as appropriate. Mix 40" sxs Type III cement and spot a balanced plug inside casing to isolate the Cliffhouse interval and cover through the Ojo Alamo tops. PUH.

 2068' 1968'
- 4. Plug #2 (Nacimiento top, 1842' 1742'): Mix and pump 16 sxs Type III cement inside casing to cover the Nacimiento top. PUH to 265'.
- 5. Plug #3 (9.625" casing shoe and surface, 265' 0'): Connect the pump line to the bradenhead valve. Pressure test the BH annulus to 300#; note the fluid volume to load. If the BH annulus tests, then mix 30 sxs Type III cement and spot a balanced plug inside the 5.5" casing to surface casing shoe, circulate cement to surface out the casing valve. TOH and LD the tubing. If the BH annulus does not test, then perforate at the appropriate depth and attempt to circulate cement to surface filling the casing and the bradenhead annulus. TOH and LD tubing WOC
- 6. ND BOP and cut off wellhead below surface casing flange. Top off cement in casing and annulus as appropriate and install P&A marker with cement to comply with regulations. RD, MOL and cut off anchors. Restore location per BLM stipulations.
