NMOCD 📈

ConocoPhillips Huerfano 287 (GL/DK) P&A

Lat N 36° 31.396′ **Long** W 107° 55.317′

PROCEDURE:

Note: All cement volumes use 100% excess outside pipe and 50' excess inside. The stabilizing wellbore fluid will be 8.3 ppg, sufficient to balance all exposed formation pressures.

All cement will be ASTM Type G, mixed at 15.8 ppg with a 1.15 cf/sx yield.

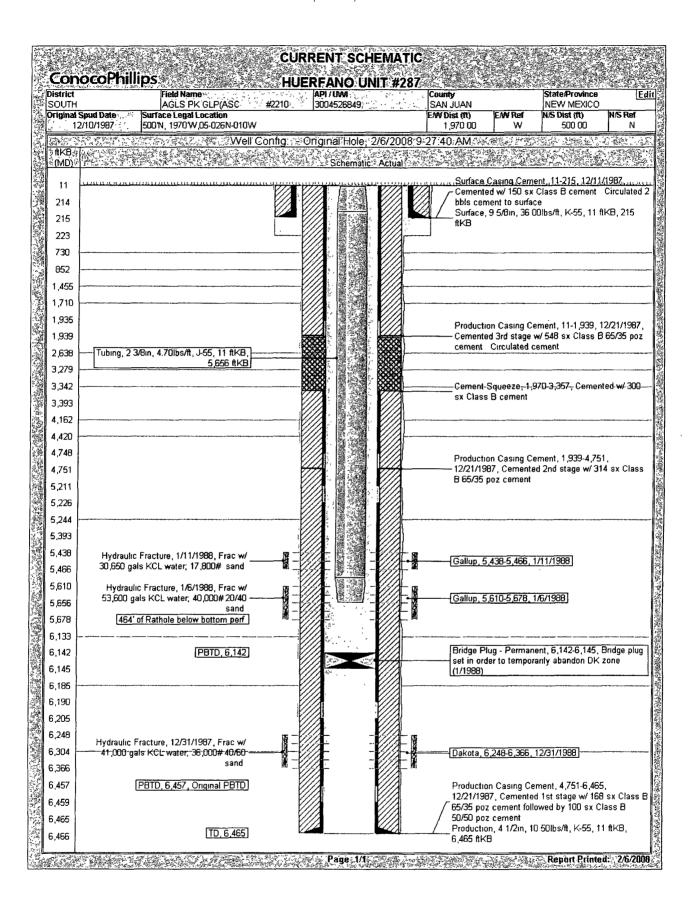

- 1. Install and test location rig anchors. Comply with all NMOCD, BLM, and ConocoPhillips safety regulations. MOL and RU daylight pulling unit. Conduct safety meeting for all personnel on location. Project will require an approved Pit Permit (C-103) from the NMOCD.
- 2. NU relief line and blow down well; kill with water as necessary. ND wellhead and NU BOP. Test BOP.
- 3. TOH and tally 2.375" tubing, total 5656'. Visually inspect tubing, if necessary LD tubing and PU workstring. Round trip 4.5" gauge ring to 6142' and tag existing CIBP (1988). **Note:**Steve Mason, BLM, on February 11, 2008, approved to cap CIBP at 6142' with 12 sxs cement and to set Plug #4 to isolate casing leaks.
- 4. **Plug #1 (Dakota interval, 6142' 6042')**: Mix 12 sxs Type G cement and spot balanced plug inside casing to isolate the Dakota interval. TOH with tubing.

5192'

- 5. Plug #2 (Gallup perforations and top, 5388' 5288'): TIH and set 4.5" cement retainer at 5388'. Pressure test tubing to 1000#. Load casing and circulate well clean. Note: casing leaks from 2688' to 5401'. Excess cement due to casing leaks. Spot 16 sxs Type G cement above CR from 5388' to 5288' to cover the Gallup interval. PUH and WOC. TIH and tag cement at 5288' or higher. If necessary spot additional cement. TOH. Bring to fill the S192'.
- 6. Plug #3 (Mesaverde top, 3329' 3229'): TIH and set 4.5" cement retainer at 3279'. Load casing and circulate well clean. Note: casing leaks from 2688' to 5401'. Excess cement due to casing leaks. Mix 56 sxs Type G cement, squeeze 40 sxs outside casing and leave 16 sxs inside to cover the Gallup interval. PUH and WOC. TIH and tag cement at 3229' or higher. If necessary spot additional cement. TOH.
- 7. Plug #4 (2738' 2638'): Note: Plug #4 due to casing leaks. TIH and set 4.5" cement retainer at 2688'. Pressure test tubing to 1000#. Load casing and circulate well clean. Note: casing leaks from 2688' to 5401'. Excess cement due to casing leaks. Mix 56 sxs Type G cement, squeeze 40 sxs outside casing and leave 16 sxs inside casing. PUH and WOC. TIH and tag cement at 2638' or higher. If necessary spot additional cement. TOH. 6 c. 75 top of 2588'

- 8. **Plug #5 (DV tool interval, 1930' 1895')**: RIH and set 4.5" CR at 1930'. Spot 5 sxs Type G cement above CIBP from 1930' to 1880' to isolate the DV tool. Circulate well clean. Load casing with water. Pressure test casing to 800 PSI. If casing tests then notify BLM and NMOCD and run Mechanical Intergrity Test. If casing does not test then contact office for further orders.
- 9. ND BOP and NU wellhead. SI well and MOL.
