Robert L. Bayless Producer LLC intends to repair a casing leak on February 29, 2008. The leak was discovered during normal operations and was isolated between 465' and 480' below KB level. There is circulation through the casing leak between the casing and the bradenhead valve at surface. It is intended to cement with a minimum of 70 sacks (hole-casing annular volume) of Type V cement with 2% CaCl by circulating cement to surface via the bradenhead. 300 sacks of cement will be present on location to ensure sufficient cement is used. There will be a 50' plug left in the casing. Upon drill out, the casing will be pressure tested to 500 psi for 30 minutes to ensure integrity.
