Four Star Oil & Gas Company respectfully submits this Subsequent Report and attached Wellbore Diagram to catch up well records and show work of our initial attempt to permanently Plug & Abandon this wellbore. Due to observed bubbles and small pressures, and upon discussion with NMOCD's Mr. Henry Villanueva, the decision was made to monitor this well prior to performing any additional actions.

8/29/2007, Set a 4.5" 10K Baker CIBP at 3990', dump bailed 20' cement on top of CIBP, tag cement @ 3970'.

9/04/2007, Identified holes in casing between 2053' & 2515'.

9/05/2007, Discussed P&A revisions with NMOCD's Henry Villanueva.

9/06/2007, NMOCD's Kelly Roberts on location. Set 39 sx Class G balanced plug at 3970' w/ 50% excess. Set 7" CIBP @ 2598'. Set 7" cement retainer @ 1986' & pumped 306 sx Class G, left 10 sx on top of retainer.

9/10/2007, Perforate 4 holes at 1610', attempted to pump in & pressured up to 1200 psi.

9/11/2007, NMOCD's Monica Kuehling on site for determination of cement top. Temperature survey indicates TOC @ ~1200' inconclusive. Ran CBL. TOC @ 1240'. Monica requested a cement plug from 1660' to 1430'.

9/12/2007, Set balanced plug 1676' to 1388' with 55 sx Class G cement. Set 7" Baker CIBP @ 340'. Perfed 4 holes at 300'. Pumped 150 sx Class G down 7' & up 7" x 9-5/8" annulus. Cement to surface after 112 sx, pumped 38 additional sxs to tank.

9/12/2007, Cement dropped approx. 20' in 7" casing. Observed bubbles from fluid in 7" casing.

Discussed with NMOCD's Henry Villanueva, decision was made to monitor bubbles and pressure before additional action is performed. (See attached Wellbore Diagram)

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that any pit or below-grade tank has been/will be constructed or closed according to NMOCD guidelines ☐, a general permit ☐ or an (attached) alternative OCD-approved plan ☐.
