### Pit, Closed-Loop System, Below-Grade Tank, or Proposed Alternative Method Permit or Closure Plan Application

Type of action:  X Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method  Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method  Modification to an existing permit  Closure plan only submitted for an existing permitted or non-permitted pit, closed-loop system, below-grade tank, or proposed alternative method	
Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request	
Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinance.	es.
I.  Operator: McElvain Oil & Gas Properties, Inc.  OGRID #: 22044	_
Address: 1050 17 <sup>th</sup> St., Ste. 1800, Denver, CO 80265-1801	
Facility or well name: <u>Lybrook No. 4</u>	
API Number: <u>30-039-30581</u> OCD Permit Number:	
U/L or Qtr/Qtr O Section 36 Township 24N Range 7W County: Rio Arriba	
Center of Proposed Design: Latitude 36.262633° N Longitude 107.52207° W NAD: 1927 X 198	- 33
Surface Owner: Federal X State Private Tribal Trust or Indian Allotment	
Temporary: X Drilling	
Closed-loop System: Subsection H of 19.15.17.11 NMAC     Type of Operation: P&A Drilling a new well Workover or Drilling (Applies to activities which require prior approval of a permit or notice of intent)   Drying Pad Above Ground Steel Tanks Haul-off Bins Other Lined Unlined Liner type: Thickness mil LLDPE HDPE PVC Other Liner Seams: Welded Factory Other Other Seams: Welded Factory Other Other Seams: Subsection I of 19.15.17.11 NMAC

#### **Temporary Pit**

#### **Operating and Maintenance Procedures**

McElvain Oil & Gas Properties, Inc. (MOG)

#### Lybrook No. 4

#### I. Design and Construction Specifications

- a. Prior to construction of the pit, zero to three inches of topsoil will be stripped from the east half of the location area and stockpiled as a berm above the cut slope around the perimeter of the location with cut slopes for future reclamation of the cut slopes and pit area during interim reclamation. Zero to three inches the topsoil from the west side of the location will be stockpiled along the toe of the fill slope with the brush and vegetation removed for future reclamation of the fill slopes during interim reclamation:
- b. In lieu of a pit sign, MOG will install and maintain a sign on the wellsite in accordance with the provisions of Rule 103.
- c. Upon completion of construction and liner installation, three sides of the pit will be fenced with a four foot hogwire fence installed on steel tee posts since this location is over 1000 feet from the nearest residential building. The fourth side (rig side) will be fenced upon completion of the drilling operation and removal of the drilling equipment. This fence will be maintained to insure no access by livestock or wildlife as long as there is fluid in the pit.
- d. The temporary pit will be constructed to the size shown on the attached Wellsite layout(s). Approximate volume is 1.06 ac-ft. It is anticipated the top four feet will be a clay alluvial material associated with this Sparank-San Mateo silt loam. The bottom six feet is unknown but is likely also similar alluvium based on the results of the test hole dug on the Lybrook 4 location. The soil removed for pit excavation will be stockpiled in the southwest corner of the pad. The pit walls will be constructed on 2:1 slopes. Any benches of rock encountered will be scraped to a depth to allow cover by soil material if possible. The side slopes will be walked down by the tractor to insure a smooth bottom and side walls for liner installation. No run on preventative measures will be installed around the pit since they will be installed on the location perimeter.
- e. The temporary pit will be lined with one section of 20 mil string reinforced LLDPE liner material with factory welded seams if necessary. If a seamed liner is used the factory welded seams will be aligned running from the rig side to the outside wall. One end will be anchored in the anchor trench and then the liner will be pulled into the pit. In the event a smooth bottom or wall slope cannot be attained on construction this liner will be underlain with a geotextile liner. The edges of the liner on the level part of the pad will be anchored in a ditch around the perimeter at least eighteen inches deep and filled with dirt. A 30' W X 90' L section of the same liner material will be installed on the rig side of the pit by anchoring the pit side in the anchor trench with the pit liner and the

balance will be anchored by piling fill dirt on the edges. This apron will be used solely for spill containment of surface equipment and will be separate from the liner.

#### II. Operational Plan

- a. MOG will operate and maintain the pit to contain the liquids and solids associated with the drilling phase of this operation, prevent contamination of the fresh water supply and protect the public health and the environment.
- b. MOG will not dispose of or store any hazardous material in this pit. All workover and completion fluids associated with flow back or circulation during these operations will be stored in a flow back tank on location.
- c. MOG will monitor the condition of the installed liner from the date it is installed until the pit is closed and will take the appropriate measures to repair and report any breach of the liner integrity in accordance with applicable regulations and procedures. The inspection will be daily during the drilling phase and the results will be recorded in the daily drillers log. The inspection will be weekly after the drilling rig is removed until the pit is closed. The results of these inspections will be kept in a log book in MOG's Farmington office.
- d. Two feet of freeboard will be maintained in the pit at all times until closure.
- e. MOG will remove all free liquid from the pit and haul it to the TNT Environmental facility, permit # NM-01-0008 within 30 days of cessation of the drilling operation. All fluids associated with drilling or workover operations that are accumulated and stored in the flow back tank will be removed within 30 days of cessation of these operations and hauled to the TNT Environmental facility.
- f. The pit will be maintained free of any solid refuse. This will be stored in a trash basket on the location.
- g. A header system or hoses without ends or unions will be used for loading liquid into the pit or removing liquid from the pit.
- h. The pit will be maintained free of any oil accumulation. MOG keeps an oil absorbent boom at their Farmington warehouse that can be dispatched to any site within two hours.

#### III. Closure Plan

- a. MOG will close this pit within six months of the completion date of the well.
- b. MOG has notified the landowner (NMSLO) by e- mail of its plan to proceed with in place burial if possible. A copy is attached. MOG will send a similar notice to the NMSLO and the OCD District office prior to initiating in place burial.
- c. MOG will initiate sampling and testing of the residue left in the pit after the completion of the liquid hauling operation in accordance with the applicable sampling and testing requirements outlined for in place burial.
  - i. If the testing of the residue meets the quality standards below, MOG will proceed with in place burial as outlined in d. below.

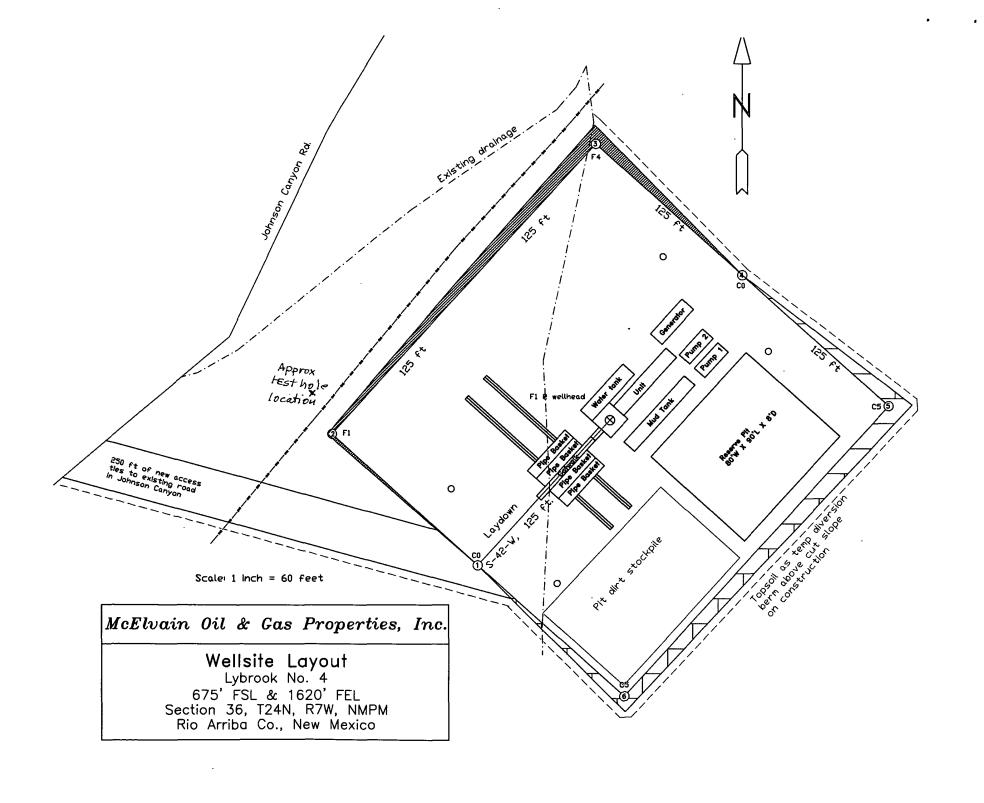

Components	Tests Method	Limit (mg/Kg)		
Benzene	EPA SW-846 8021B or 8260B	0.2		
BTEX	EPA SW-846 8021B or 8260B	50		
ТРН	EPA SW-846 418.1	2500		
GRO/DRO	EPA SW-846 8015M	500		
Chlorides	EPA 300.1	1000/463		

- ii. If test results of the residue do not meet the quality standards for on site burial, MOG will dispatch a vacuum truck as soon as practical in the contractors schedule. They will remove the residue and haul it to the TNT Environmental facility, permit # NM-01-0008. After the residue is removed the pit liner will be removed and hauled to an approved waste facility in Rio Arriba County. MOG will then initiate testing and sampling of the pit area as outlined in the Waste Evacuation and Haul section of the regulations. Results of these tests will be reported to the Aztec district office and the applicable closure method initiated.
- d. MOG will mix stockpiled pit dirt with residue at a 3:1 ratio to stabilize the residue.
- e. MOG will remove the pit apron and cut and remove that section of the pit liner above the stabilized residue line. These will be disposed of in an approved solid waste facility in Rio Arriba or San Juan County.
- f. MOG will use the remaining pit dirt stockpile to provide a compacted fill over the stabilized residue to a depth within two feet of the graded location level. The remaining pit dirt will be spread over the pit side area, outside of the anchor pattern, to re-contour the pit area. Topsoil stockpiled in the buffer outside the pit slopes will then be pushed over the re-contoured pit area and seeded with a seed mix specified by the landowner in the next applicable seeding season.
- g. MOG will file the applicable closure report with attachments within 60 days of completion of closure.
- h. MOG will install a 4" X 4' steel marker at the center of the buried pit during interim reclamation.
- IV. Siting Requirements substantiation and hydrogeologic data
  - a. Hydrogeologic data
    - i. Surface formation San Jose Formation
    - ii. Geographic setting Located in the bottom of Johnson Canyon adjacent to the existing access road.
    - iii. Soils Sparank-San Mateo silt loam- a slightly saline to very slightly saline silt loam to clay formed by the erosion of the sands and shales of the San Jose formation deposited as a fan alluvium over the subject area. Typical distribution is 0 2 inches: silt loam; 2 60 inches: Clay. Laid down on 2-4% slopes across location area.
    - iv. Drainage Generally to the west and northwest. There are no identified drainages in the area of the subject location shown on the attached wellsite diagram. The location area is basically a sheet wash area for run off from the bluffs to the east. There will be no impact to the drainage due to this location

construction. The runoff will be diverted around the pad by construction of ditches and berms along the east, south and north side of the pad above the cut slope.

#### b. Siting requirements substantiation

- i. A search of the iWaters database was conducted covering all the sections surrounding the proposed drillsite. There was one well identified on the iWaters data base, SJ006816. Ownership is uncertain. The iWaters review and discussion with the NMSLO did not reveal any depth to ground water information. The well is also identified in Report # 6 of the New Mexico Bureau of Mines and Mineral Resources but this also contained no information on depth to ground water. This well is shown on USGS topo maps and scales to 3800 feet from the proposed location. Visual inspection revealed there is a wash bottom immediately adjacent to this well which is 20 feet below ground level with no sign of water present in wash bottom. During the visual inspection, the canyon rims to the east were reviewed for signs of springs since there is one identified spring on the topo map two miles to the west. No signs of springs were evident from this visual review. A test hole was drilled adjacent to this proposed location west and north of corner 2. A handheld gps reading of ground level elevation of test hole yielded 6752 feet. Plotting this location on the topo map confirms this is valid elevation. Based on this elevation and depth to ground water on the test hole of 85 feet yields a subsea elevation to groundwater of +6667 feet. Estimated ground level elevation gain to the center of the pit is 2.2 feet and cut to pit bottom is 11.7 feet. This calculates a depth to ground water of 76 feet below the bottom of the pit at the center.
- ii. There are no flowing watercourses within 300 feet of the proposed pit. There are a cluster of intermittent washes west of the location which are classified as significant for the purposes of this evaluation. The scaled distance from the topo map is 600 feet.
- iii. There are no residences or buildings within 1000 feet of this location.
- The closest water well is 3800 feet north and the closest spring is two miles west.
- v. This is a rural area location.
- vi. A review of the USFWS wetland map revealed one site, 1.3 miles to the southwest. Visual inspection revealed a pond and dam 2000 feet west. It is currently dry and is obviously a runoff collection facility.
- vii. This was not identified as part of the FEMA 100 year flood plain as illustrated on the attached FIRM.
- viii. There were no unstable areas noted during the field inspection nor evidence of underground mining activity. There are no identified mining or quarry operations identified on the Bureau of Mines website.

Notification of intent to close pit using onsite burial - Lybrook 3 & 4

#### Jeff:

This is to notify your office that McElvain Oil & Gas Properties, Inc. intends to close the pits on these two locations using the onsite burial methods prescribed by the current New Mexico pit regulations.

#### MAP INFORMATION

Map Scale: 1:6,940 if printed on A size (8.5" × 11") sheet.

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for accurate map measurements.

Source of Map: Natural Resources Conservation Service Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov Coordinate System: UTM Zone 13N NAD83

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Rio Arriba Area, New Mexico, Parts of Rio Arriba and Sandoval Counties

Survey Area Data: Version 8, Nov 12, 2008

Date(s) aerial images were photographed: 10/13/1997

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

#### **Description of San Mateo**

#### Setting

Landform: Flood plains

Landform position (two-dimensional): Toeslope Landform position (three-dimensional): Talf

Down-slope shape: Linear Across-slope shape: Linear

Parent material: Stream alluvium derived from sandstone and shale

#### Properties and qualities

Slope: 0 to 3 percent

Depth to restrictive feature: More than 80 inches

Drainage class: Well drained

Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: More than 80 inches

Frequency of flooding: Rare Frequency of ponding: None

Calcium carbonate, maximum content: 15 percent

Gypsum, maximum content: 1 percent

Maximum salinity: Very slightly saline to slightly saline (4.0 to 8.0

mmhos/cm)

Sodium adsorption ratio, maximum: 30.0

Available water capacity: High (about 9.1 inches)

#### Interpretive groups

Land capability (nonirrigated): 6e

Ecological site: Salty Bottomland (R036XB010NM)

#### Typical profile

0 to 2 inches: Silt loam

2 to 60 inches: Stratified sandy loam to clay loam

#### **Data Source Information**

Soil Survey Area: Rio Arriba Area, New Mexico, Parts of Rio Arriba and Sandoval

Counties

Survey Area Data: Version 8, Nov 12, 2008

Landform position (three-dimensional): Nose slope, side slope, head

slope, crest

Down-slope shape: Convex Across-slope shape: Convex

Parent material: Eolian deposits over slope alluvium derived from

sandstone

#### **Properties and qualities**

Slope: 2 to 6 percent

Depth to restrictive feature: More than 80 inches

Drainage class: Well drained

Capacity of the most limiting layer to transmit water (Ksat): High (2.00

to 6.00 in/hr)

Depth to water table: More than 80 inches

Frequency of flooding: None Frequency of ponding: None

Calcium carbonate, maximum content: 5 percent Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)

Sodium adsorption ratio, maximum: 12.0

Available water capacity: Moderate (about 7.0 inches)

#### Interpretive groups

Land capability (nonirrigated): 6c

Ecological site: Gravelly Loamy (R036XB006NM)

#### Typical profile

0 to 2 inches: Sandy loam 2 to 6 inches: Sandy loam

6 to 24 inches: Coarse sandy loam 24 to 60 inches: Sandy loam

#### INSTRUCTIONS

Declaration shall be executed (preferably typewritten) in triplicate and must be accompanied by a \$1.00 filing fee. Each of triplicate copies must be properly signed and attested.

A separate declaration must be filed for each well in use.

All blanks shall be filled out fully. Required information which cannot be sworn to by declarant shall be supplied by affidavit of person or persons familiar with the facts and shall be submitted berewith.

Secs. 1-3. Complete all blanks.

Sec. 4. Fill out all blanks applicable as fully as possible.

Sec. 5. Irrigation use shall be stated in acre feer of water per acre per year applied on the land. If used for domestic, municipal, or other purposes, state total quantity in acre feet used annually.

Sec. 6. Describe only the acreage actually irrigated. When necessary to clearly define irrigated acreases, describe to nearest 2% acre subdivision. If located on unsurveyed lands, describe by legal supdivision "as projected" from the nearest government survey corners, or describe by metes and bounds and the survey to some permanent, easily-located natural object.

Sec. 7. Explain and give dates as nearly as possible of any years when all or part of acreage claimed was not irrigated.

Bec. 8. If well irrigates or supplies supplemental water to any other land than that described above, or if land is also irrigated from any other source, explain under this section. Give any-other data necessary to fully describe water right.

If additional space is necessary, use a separate sheet or sheets and attach securely hereto.

Dear Sir:

In response to your letter dated January 6, 1985 and our telephone conversation of January 14, 1985, the following is a list of the water rights recorded in your name in the Albuquerque Office of the State Engineer.

The first column is the State Engineer assign file number. Please use this number in any correspondence when referring to a specific well. The second column in the reported location. Enclosed is a sheet detailing the method used to note the location. The third column is the status of the right. The fourth column is the reported use of the right and the last column is the amount declared, permitted, or applied for.

If you have any questions or require additional information, please do not hesitate to call or write.

Yours truly,

Ronald J. McBrayer District 1 cc: file SEO Santa Fe

For this purpose, the section is divided into four quarters, numbered 1, 2, 3, and 4, in the normal reading order, for the northwest, hortheast, southwest, and southeast quarters, respectively. The first digit of the fourth segment gives the quarter section, which is a tract of 160 acres. Similarly, the quarter section is divided into four 40-acre tracts numbered in the same manner, and the second digit denotes the 40-acre tract. Finally, the 40-acre tract is divided into four 10-acre tracts, and the third digit denotes the 10-acre tract. Thus, well 12.36.24.342 in Lea County is in the NE2SE2SW2 sec. 24, T. 12 S., R. 36 E. If a well cannot be located accurately within a 10-acre tract, a zero is used as the third digit, and if it cannot be located accurately within a 40-acre tract, zeros are used for both the second and third digits. If the well cannot be located more closely than the section, the fourth segment of the well number is omitted. When it becomes possible to locate more accurately a well in whose number zeros have been used, the proper digit or digits are substituted for the zeros. Letters a, b, c, etc., are added to the last segment to designate the second, third, fourth, and succeeding wells in the same 10-acre tract.

A modification of this system has been used for wells on grant land in Sumshine Valley in Taos County where land was sectionized according to a system used in Colorado and extended into New Mexico. Within the Sangre de Cristo Grant, townships south of the State line have been designated T. 1 S., and T. 2 S., whereas townships north of the State line are designated T. 1 N., etc.

Figure 2 diagrams the method of numbering wells and tracts in New Mexico.

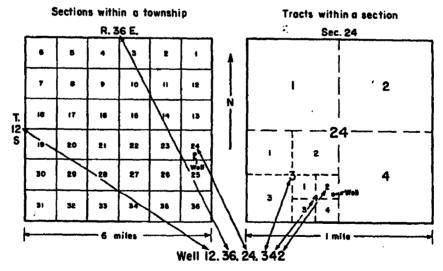

FIGURE 2, -- System of numbering wells in New Mexico.

To: J. K. Couzens

From: E. C. Barry

Subejct: Declarations of Ownership of Livestock Dam or Tank and Declarations of Owner of Underground Water Right by Homer C. Berry for Surface tanks, windmills, springs, pipeline storage, seep tanks and domestic water wells.

Refer to Topographic Sheets 16.1.1, 16.1.3, 16.3.1, 15.2 and 15.4.2

Field checks by E. C. Barry on May 4, 5, 10 and 11, 1977 disclosed the following:

- 1. The surface tanks, seep tanks and windmills were constructed as declared. The pipeline storage was as declared and the water is purchased from the Lybrook Water Users Association. The springs were in use as declared and water was flowing from most of the Springs.
- 2. Mr. Berry assisted in locating each declared location and it was noted that some locations could be corrected to disclose a more suitable location. On August 5, 1977 Mr. Berry filed a supplement for corrections to several of the declared locations. On August 5, 1977 Mr. Berry also filed a supplement to disclose other surface tanks, windmills, pipeline storage, springs and seep tanks discovered by the field checks that were not declared. These are to be added to the list that was filed on December 10, 1976.
- No supporting evidence was filed with the declarations to show that a given amount in acre feet was sold and used for commercial purposes.

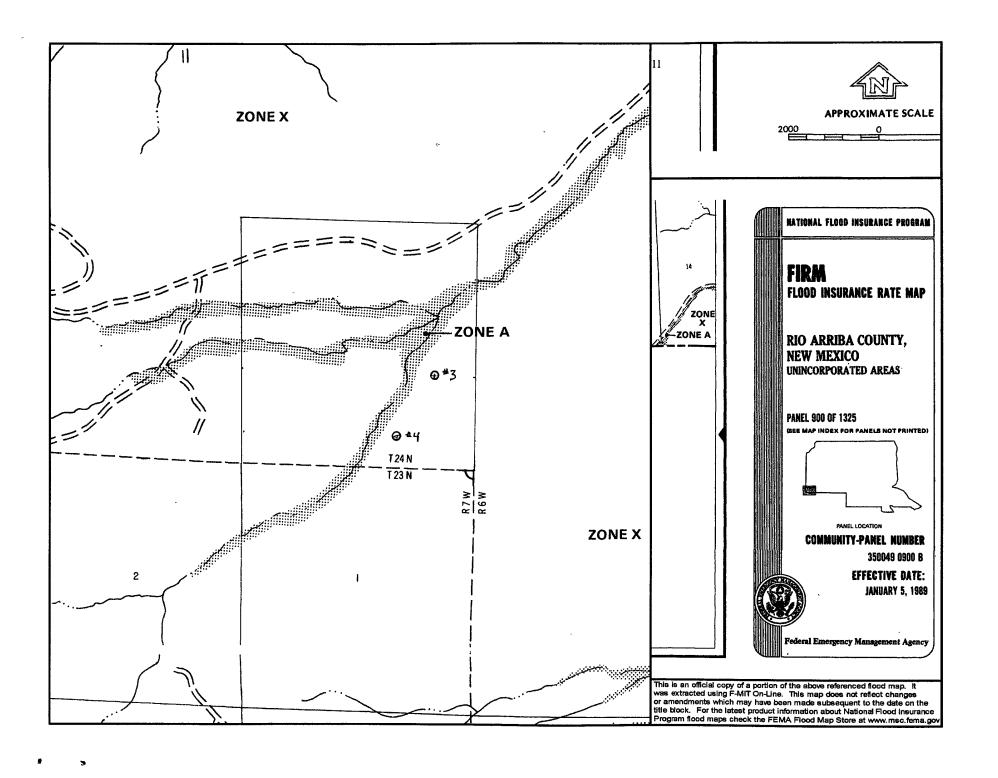

Summary: It is recommended that the Declarations be filed for record.
