- 13 Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

XTO Energy Inc., received verbal approval from Jim Lovato w/BLM at 8:55 a.m., 06/05/2009 to MIRU PU during the Ensenada Mesa closure to evaluate the wellbore for a possible Csg lk. It is proposed to set a Baker Model R Packer on 2-3/8" tbg at 3070'. The tubing casing annulus will be pressure tested to 550 psig for 30 minutes. If the wellbore passes the pressure test, the packer will be removed and the tubing will be landed at 3140'. If the wellbore fails the pressure test, the pulling unit will be rigged down. After the Ensenada Mesa closure period ends a pulling unit will be moved in. The depth of the casing leak will be determined and after consultation with BLM and NMCD a plan of action will be determined to repair the casing failure.

Approval was given to set packer above the Pictured Cliffs perforations to evaluate the wellbore for a casing leak. The approval to set the packer is not to exceed 6 months from the date of installation.

<b>Detailed Description of Proposed Action Requiring Verbal Approval</b>				
<p>XTO requests permission to MIRU PU during the Ensenada Mesa closure to evaluate the wellbore for a possible casing leak. It is proposed to set a Baker Model R packer on 2-3/8" tbg at 3070'. The tubing casing annulus will be pressure tested to 550 psig for 30 minutes. If the wellbore passes the pressure test, the packer will be removed and the tubing will be landed at 3140'. If the wellbore fails the pressure test, the pulling unit will be rigged down. After the Ensenada Mesa closure period ends a pulling unit will be moved in. The depth of the casing leak will be determined and after consultation with BLM and New Mexico Oil Conversation Division a plan of action will be determined to repair the casing failure.</p>
