1) Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). Data below to satisfy NM OCD Rule 303.C.3 (b) (i)-(vii)

i. Pre-approved Pool Division Order R-13122.

ii. Pools to be commingled: Blanco MV 72319, Basin Mancos 97232, Basin Dakota 71599.

iii. Perforated intervals: Blanco MV 5509'-6314', Basin Mancos 7210'-7599', Basin Dakota 8255'-8339'.

iv. Fixed percentage allocation based upon production data of 39% Blanco MV, 37% Basin Mancos, and 24% Basin Dakota. This is based on the historic production of all wells that have MV/MC/DK production. See attached recommendation for details. This allocation may be adjusted at a later date based on a spinner survey after production has stabilized.

v. Commingling will not reduce the value of reserves.

vi. All interest owners in the spacing unit have not been notified of the intent to downhole commingle per order R-12991.

vii. The BLM has been notified on sundry notice form 3160-5.

Exploration & Production

## **Production Allocation Recommendation Rosa # 138D (DK/MC/MV)**

**WELLNAME:** Rosa #138D  
**LOCATION:** Sec.17, T31N,R06W  
**API No.:** 03-045-34959

**FIELD:** Rosa Blanco  
**COUNTY:** San Juan, NM  
**Date:** 7-21-09

**Current Status:** Williams is currently completing the Rosa #138D in the Dakota, Mancos, and Mesa Verde formations. Williams recommends tri-mingling the well after the proposed completion work has been completed.

### **Commingle Procedure:**

1. Acidize & fracture stimulate the DK, MC, and MV formations
2. Flow back and clean up each formation prior to completion.
3. TIH w/ work string and remove CIBP
4. Clean out to PBTD
5. Complete with single string 2-3/8" tubing, landed below DK perms
6. NDBOP. NUWH.
7. Turn well over to production as a tri-mingle

**Allocation Method:** Williams has assembled historic production data used to forecast Mancos production. Williams used this production data to come up with an initial allocation for this tri-mingle. Williams recommends that a spinner survey be performed after production has stabilized, so that allocation percentages can be corrected if need be.

After 18 months of production:

Total Production from well = 364,108 Mcf  
Total Production from DK = 86,405 Mcf  
Total Production from MC = 136,202 Mcf  
Total Production from MV = 141,500 Mcf

DK allocation =  $\text{DK prod} / \text{Total prod} = 86,405 \text{ Mcf} / 364,108 \text{ Mcf} = \mathbf{24\%}$

MC allocation =  $\text{MC prod} / \text{Total prod} = 136,202 \text{ Mcf} / 364,108 \text{ Mcf} = \mathbf{37\%}$

MV allocation =  $\text{MV prod} / \text{Total prod} = 141,500 \text{ Mcf} / 364,108 \text{ Mcf} = \mathbf{39\%}$
