Pit, Closed-Loop System, Below-Grade Tank, or  
Proposed Alternative Method Permit or Closure Plan Application

Type of action: ☐ Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method  
☐ Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method  
☐ Modification to an existing permit  
☒ Closure plan only submitted for an existing permitted or non-permitted pit, closed-loop system, below-grade tank, or proposed alternative method

**Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request**

Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

**EnerVest Operating, LLC (EV)**

**BELOW-GRADE TANK  
CLOSURE REQUIREMENTS**

**Rule 19.15.17.13**

- J. EV shall research county tax records to determine the name and address of the surface owner of the properties involved. EV shall notify this surface owner via certified mail, return receipt requested that the closure of a below-grade tank is being planned.

EV will notify the appropriate district office prior to any closure operations beginning. Such notification shall be at least 72 hours prior to beginning work but not more than one week prior to beginning work. Such notice shall contain at a minimum the following:

Operators Name  
Unit letter, Section, Township, & Range of well  
Lease name and well number  
API Number of well

- A. EV shall close all existing below-grade tanks which do not meet the requirements of NMAC 19.15.17.11 by June 15, 2013 or retrofit each one to insure total compliance with the subsections of 19.15.17.11 before June 15, 2013.

Within 60 days of cessation of the below-grade tanks operation or as required by Subsection B of 19.15.17.17 NMAC, EV shall close the below-grade tank in accordance with a closure plan that the appropriate division district office approves.

- E. .All free standing liquids will be removed at the start of the pit closure process from the pit and disposed of in one of the below division-approved facility as indicated below:

TNT Land Farm	Permit # NM-01-0008
Environtech Land Farm	Permit # NM-01-0011

EV will remove the below-grade tank and steam clean in an attempt to put back into service. If the tank is not reusable it will be disposed of, after cleaning, by crushing or cutting into pieces and sold for scrap iron.

EV will remove any and all on-site equipment associated with the below-grade tank, unless it is used elsewhere for other purposes.

In instances where there are multiple below-grade tanks on site, EV will make every attempt to limit the new below-grade tanks to a single unit. This will be dependent on possible hazardous road conditions during the winter months.

Upon removal of the below-grade tank, EV will inspect the area previously beneath the below-grade tank looking for any wet, discolored, or any other showing evidence of a release. Upon such discovery, EV will take, at a minimum, a five point composite sample; collect individual grab samples and analyze for the following:

Components	Test Method	Limits (mg/Lg)
Benzene	EPA SW-846 8021B or 8260B	0.2
BTEX	EPA SW-846 8021B or 8260B	50
TPH	EPA SW-846 418.1	100
Chlorides	EPA 300.1	250 or background, whichever is greater

EV will insure that the results of all sampling shall be reported to the division on approved form C-141.

If there is no indication of any release due to the absence of wet, discolored, or any other evidence or sampling demonstrates that concentrations specified above have NOT been exceeded, or that a release has NOT occurred, EV will backfill the excavation with compacted, non-waste containing, earthen material, construct a division prescribed soil cover, and recontour and re-vegetate the site. The division prescribed soil cover, recontouring, and re-vegetation shall comply with 19.15.17.13.

If it has been determined that a release HAS OCCURRED, EV will immediately begin the notification process, dependent upon the determination of a MAJOR or MINOR release, as defined in 19.15.29.7(A)(B). Within 24 hours the appropriate division district office and the Division Environmental Chief will receive verbal notification of such a release, to include well name and number, location, API No., and type & amount of release. Within fifteen (15) days, the appropriate division district office and the Division Environmental Chief will receive a completed form C-141, outlining the details of the release.

Any and all contaminated soil or sludge will be removed and transported to one of the following:

TNT Land Farm

Permit # NM-01-0008

Environtech Land Farm

Permit # NM-01-0011

EV will insure the site shall be contoured to blend in with the surrounding terrain.

EV will insure the soil cover shall consist of the background thickness of topsoil or one foot of suitable material for establishing vegetation at the site, whichever is greater.

EV will insure the soil shall be spread in such a manner as to prevent the pooling of water

If the reclaimed area is NOT part of the pad area, the area shall be reseeded at the first growing season after the completion of all work. The seed mixture shall be drilled on the contour whenever practical and comprised of Jicarilla Apache Tribal approved mixture. At least 70 percent of the native perennial cover (unimpacted by overgrazing, fire, or other intrusive damage) shall be maintained through two successive growing seasons. Irrigation will not be used to accomplish the required ground cover.

Within 60 days of completion of closure operations, EV will file Form C-144, with attachments, outlining the detailed operations of the closing operations.
