For temporary pits, closed-loop systems, and below-grade tanks, submit to the appropriate NMOCD District Office.

For permanent pits and exceptions submit to the Santa Fe Environmental Bureau office and provide a copy to the appropriate NMOCD District Office.

9299 Pit, Closed-Loop System, Below-Grade Tank, or
Proposed Alternative Method Permit or Closure Plan Application
Type of action: Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method Modification to an existing permit Closure plan only submitted for an existing permitted or non-permitted pit, closed-loop system, below-grade tank, or proposed alternative method
Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request
Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances
Operator: Williams Operating Co, LLC OGRID #: 120782
Address: PO Box 640 / 721 S Main Aztec, NM 87410
Facility or well name: Rosa Unit 154B
API Number: 3003930804 OCD Permit Number:
U/L or Qtr/Qtr P Section 7 Township 31N Range 5W County: Rio Arriba
Center of Proposed Design: Latitude 36.90961 N Longitude -107.39748W NAD: □1927 ☒ 1983

Williams Production Co., LLC San Juan Basin: New Mexico Assets

Temporary Pit
Drilling/Completion and Workover

Type of action & rational

⊠ Iransfer • •	Drilling Pit to Completion/Workover Pit Williams proposes to utilize the same pit built to drill the well for the subsequent workover/completion activities noted in the well APD and necessary to bring the subject we into optimum production. Utilization of the same pit will minimize environmental impacts and waste of resources (i.e. waste of fuel and associated greenhouse emissions, surface disturbance). Workover Rig to be mobilized within six months of Drilling Rig demobilized.
☐ Iransfer	Drilling Pit from
•	(well name) As required by the Surface Owner and/or Surface Managing Agency (e.g. BLM, USFS, Tribal), Williams is being required to utilize the same well pad for multiple new wells. In these cases, Williams proposes to utilize the same pit for all the new wells to be drilled. Utilization of the same pit will minimize environmental impacts and waste of resources (i.e. waste of fuel and associated greenhouse emissions, surface disturbance). Williams has permitted the common pit for each well, and requests permission to transfer the pit since the first well has been drilled and completed. Pit to be considered closed for first well named. Drill Rig to be rig-up within six months of former rig demobilized.
•	As required by the Surface Owner and/or Surface Managing Agency (e.g. BLM, USFS, Tribal), Williams can not conduct construction or similar activities during Seasonal Closures and therefore can not meet the closure requirements specified in the referenced rule. Closure will be scheduled and initiated as soon as the Seasonal Closure is lifted.

Transfer Plan

In accordance with Rule 19.15.17 NMAC, this Modification/Transfer (M/T) Plan describes the modifications to the Design and Construction (D&C), Operations and Maintenance (O&M) and Closure Plans for the transfer of a previously permitted Temporary Pit on a Williams Production Co, LLC (WPX) location in the San Juan Basin of New Mexico.

This M/T plan will be followed in that case

D&C Plan:

No proposed changes. Williams will comply with the original Design Plan. This will
include ensuring that the original design of the pit is large enough to accommodate all
of the fluids and solids.

O&M Plan:

- The pit is to be considered out-of-service for the purpose of drilling the referenced well.
- The pit status will be considered in-service during this transition to and during the scheduled workover/completion activities.
- Pit inspections during the period between drill-rigdown and workover/completion-rigup will be weekly.
- The fluid will be removed within 30 days after the completion of each process.
- Williams will conduct an inspection and take photo documentation no more than seven days prior to the pit being placed back into use.
- Williams will notify NMOCD district office 7-14 days prior to start of each process.
- If any mud and solids require removal to ensure the two-foot freeboard is maintained, it will be removed by use of a Supersucker® (or similar equipment that will not damage the liner) and disposed of offsite at Envirotech (Permit Number NM-01-0011).
- Williams will sample the contents of the pit after each process is completed for Benzene, BTEX, and TPH (only required for a pit used for multiple wells).
- No other modifications or changes to the operation and maintenance of the pit will take place.

Closure Plan:

- Due to the use of the pit for multiple processes the confirmation sampling will occur only
 after the contents have been stabilized to ensure a representative sample (only required
 for a pit used for multiple wells).
- Williams will submit the photo documentation and testing stated above with the C-144 closure.
- All APD #s and well names will be placed on the C-144 form when the closure form is filed
- No additional proposed changes except as noted above, Williams will comply with the rest of the original Closure Plan.

Williams realizes this does not relieve them of any of the requirements of 19.15.17 NMAC.
