13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

As stated in Sundry Notice dated 7/28/2009, it was suspected that the well had a hole in the casing which was proposed to be repaired. Subsequent examination and testing revealed no hole in the casing. However, there has been a continued inflow of water through the perforations in the Fruitland Coal. Chemical composition tests of the produced water suggest migration from an uphole formation, not the Fruitland Coal.

Suspect a microannulus in the primary cement behind the 4-1/2" production casing is allowing water migration from an uphole formation.

Propose to run Audio Log to locate microannulus and Cement Bond Log (CBL) to determine status of primary cement job in anticipation of a cement squeeze repair.
