If a Watercourse was Impacted, Describe Fully.

Describe Cause of Problem and Remedial Action Taken.  
**Newly drilled well – due to incomplete well cleanout following completion, sand and particulate returned eroded piping and connections to the surface production unit (separator). Gas vented following pipe failure until well was shutin. Vented for approximately 3 hours at +/- 300 psi from a 1/4 in hole. Well shutin, unit and all damaged piping replaced. Well head and associated valves inspected and tested prior to returning location on line.**

Describe Area Affected and Cleanup Action Taken.  
**No cleanup required. To avoid similar problems, future completions will be more closely evaluated to assess when to place well on line. No further action being taken at this time.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
