Describe Cause of Problem and Remedial Action Taken.\* ☐ **A water truck was on location pulling produced water from a 180 barrel water tank. While opening the valve on the load line the valve broke and approximately 150 barrels of produced water was released into the berm. The truck on location began recovery immediately and a second truck was dispatched. All standing water produced water was recovered from the berm, approximately 140 barrels. Upon further investigation it seems an aluminum fitting was screwed into the steel tank the dissimilar metals had a corrosive reaction contributing to the failure.**

Describe Area Affected and Cleanup Action Taken.\* ☐ **A second vac truck was dispatched immediately and all notifications were made. Vac truck recovered approximately 140 barrels of standing produced water from the berm. The valve was repaired.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
