Upon arrival it was discovered that the tanks were overflowing and a portion of the secondary containment berm had washed away. Water hauling and vac trucks were dispatched immediately to empty the tanks. Based on gauge measurements approximately 673 barrels of produced water was released. Produced water ran over the washed out portion of the berm to the side of location. Describe Area Affected and Cleanup Action Taken.* A portion of the berm for the secondary containment was washed away and produced water traveled to the side of the location. Vac trucks were dispatched immediately and recovered approximately 620 barrels of water. Soil and water samples were collected and soil was excavated and disposed of at a licensed facility. Need for further clean up is being examined. I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
