Describe Cause of Problem and Remedial Action Taken.* **On March 31, 2009, a COPC MSO discovered that the separator had over pressured causing the rupture disk to blow. Approximately 80 MCF natural gas was calculated to have been released at the Ute Mountain Ute #48 as a result. Upon discovery the well was shut in. COPC replaced the rupture disk, reset the amatek, and adjusted the motor valve.**

Describe Area Affected and Cleanup Action Taken.* **All of the natural gas was released to the atmosphere. To prevent reoccurrence, COPC will monitor inlet valves for correct setting.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
