10" stainless steel line between the filter pot and the pump developed a leak. Upon discovery, the main inlet to the water transfer station was shut off and the leak was isolated. All fluids remained within the bermed area, and 15 BBL was recovered by vacuum truck. A blind flange was installed and the leak was thus repaired. The leaking line will be replaced with a new hose. Describe Area Affected and Cleanup Action Taken.* All fluids remained within the bermed area, and 15 BBL was recovered by vacuum truck. The remaining impacted soils were allowed to dry and raked to promote rehabilitation of the soils. A blind flange was installed and the leak was thus repaired. The leaking line will be replaced with a new hose.					
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
