	If YES, Volume Impacting the Water	course.
☐ Yes ☑ No If a Watercourse was Impacted, Describe Fully.*		
if a watercourse was impacted, Describe Puriy.		
Juan 28-7 Unit #156F on the morning of 11/15/07, due to a weld failure in the tank under the water drain collar, most likely as the result of internal corrosion. All fluids were contained within the bermed area, but none was recoverable, with all fluids soaking into the soil within the berm. The well was shut in, a One-Call was made, and excavation will begin in approximately one week for remediation of impacted soils. CUD NOV 20 '07 OIL CONS. DIV.		
Describe Area Affected and Cleanup Action Taken.* All fluids were contained within the bermed area, but none was recoverable,		
with all fluids soaking into the soil within the berm. Upon approval of a One-Call, excavation of the impacted soils for remediation will begin. A final report will be sent upon completion of excavation activities.		
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
