Describe Cause of Problem and Remedial Action Taken.\* **Our MSO (lease operator) discovered a 5 BBL produced water spill at the Canyon Largo Unit #431E on 6/6/07, due to the produced water pit tank overfilling. The tank overfilled because telemetry equipment for monitoring the tank level malfunctioned, the line pressure dropped, and the well unloaded more produced water than anticipated. All fluids remained in the bermed area and 4 BBL were recovered by vacuum truck.**

Describe Area Affected and Cleanup Action Taken.\* **All fluids remained in the bermed area and 4 BBL were recovered by vacuum truck. For remediation of the impacted soils, the soil was raked and mixed with Gator soaker. The tank level telemetry will be repaired.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
