By Whom? Monica D. Johnson Was a Watercourse Reached?	If YES, Volume Impacting the Water	
_ Yes ⊠ No		acourse.
If a Watercourse was Impacted, Describe Fully.*		
at the Vaughn #14N on the morning of 11/12/07, due to the condensate tank overfilling. All fluids were contained within the tank berm area, but all fluids soaked in to the soil with no free product recoverable. Upon discovery, the well was shut in until the contents of the tank can be sold.  Describe Area Affected and Cleanup Action Taken.* All fluids were contained within the tank berm area, but all fluids soaked in to the soil with no free product recoverable. The initial plan is that the impacted soils will be excavated for		
remediation, after which a final report will be sent.  I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and		
regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
