Latitude 36.53286° Longitude 107.70015°

NATURE OF RELEASE

Type of Release – Condensate Produced water	Volume of Release – 6 BBL	Volume Recovered – none
Source of Release: Hole in condensate tank	Date and Hour of Occurrence Prior to 3/20/07	Date and Hour of Discovery 3/20/07 – 11:30 p.m.
Was Immediate Notice Given? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom? Brandon Powell – OCD – via email	RCVD APR23'07
By Whom? Monica D. Johnson	Date and Hour – 3/21/07 – 4:30 p.m.	OIL CONS. DIV.
Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	DIST. 3

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.* **A condensate spill of an estimated 6 BBL at the Cuccia Com B #4 was reported on 3/21/07, due to a hole in the bottom of the 210 BBL condensate tank due to corrosion. However, after the investigation, it was determined that the tank contained both condensate and produced water and that the spill was actually produced water rather than condensate. All spilled fluids remained within the bermed area. The tank was cleaned and removed from location on 3/26/07 and soil samples were collected at various points.**

Describe Area Affected and Cleanup Action Taken.* **All spilled fluids remained within the bermed area. The tank was cleaned and removed from location on 3/26/07 and soil samples were collected at various points. A soil sample collected from the east side of the tank at the surface was analyzed with a PID, with results of 805 ppm; a soil sample was also collected at 5 feet east of the tank and 2 feet down with PID results of 25 ppm. Another sample at 5 feet north of the tank and 2 feet down yielded PID results of 7 ppm. A sample 1 foot below the hole in the tank yielded PID results of 15 ppm, and at 3 feet below the hole in the tank yielded PID results of 7.3 ppm. For these reasons, it was determined that there is no evidence of hydrocarbons from the spill and the spill was actually produced water. The soils were raked for natural remediation and to prevent a crust from forming, and a new tank was set on location.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
