If a Watercourse was Impacted, Describe Fully.*			En DIST. 3
Describe Cause of Problem and Remedial Action Taken.* A condensate spill of 84 BBL was discovered at the Schlosser WN Federal #2R on Tuesday, 1/24/06 at 2:00 p.m., where the 3" load line valve on the condensate tank froze and broke, spilling 84 BBL condensate into the bermed area. All spilled fluids remained within the berm but soaked in, as the soil is very sandy at this location. A vacuum truck removed the remaining contents of the tank so that the tank valve could be replaced with a non-freeze valve and also so that the tank can be moved for remediation of the soil.  Describe Area Affected and Cleanup Action Taken.* All spilled fluids remained within the berm but soaked in, as the soil is very sandy at this location. The tank will be moved and the impacted soils will be excavated and hauled to Envirotech's landfarm, with the excavated area being backfilled with clean fill dirt. Excavation will continue until it is determined			
that a five-point composite soil sample of the four sides and the bottom of the excavation has a TPH level of <5,000			
ppm and a total BTEX level of ≤50 ppm, or to the maximum depth and horizontal extent practicable. (A field soil vapor headspace measurement of 100 ppm may be substituted for the BTEX analysis.) Final lab analysis results will be included in the final report following remediation activities.			
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
