PLUG AND ABANDONMENT PROCEDURE

May 21, 2010

Gallegos Federal 26-12-31 #1S

Basin Fruitland Coal
1850' FNL and 810' FWL, Section 31, T26N, R12W
San Juan County, New Mexico / API 30-045-31904
Lat: / Lat:
•

Note: All cement volumes use 100% excess outside pipe and 50' excess inside. The stabilizing wellbore fluid will be 8.3 ppg, sufficient to balance all exposed formation pressures. All cement will be Class B, mixed at 15.6 ppg with a 1.18 cf/sx yield.

1. This project requires a NMOCD C-144 CLEZ Closed-Loop System Permit for the use of an A-Plus steel tank to handle waste fluids circulated from the well and cement wash up.

2. Install and test location rig anchors. Comply with all NMOCD, BLM, and Operator safety regulations. MOL and RU daylight pulling unit. Conduct safety meeting for all personnel on location. Record casing, tubing and bradenhead pressures. NU relief line and blow down well. Kill well with water as necessary and at least pump tubing capacity of water down the tubing. ND wellhead and NU BOP. Function test BOP.

3. Rods: Yes_X_, No___, Unknown____, Size____2.375''__, Length____1201'__. Packer: Yes___, No_X_, Unknown____, Type_____. If this well has rods or a packer, then modify the work sequence in step #2 as appropriate.

4. Plug #1 (Pictured Cliffs interval and Fruitland top, 1079' – 760'): PU and TIH with 4.5" cement

- 4. Plug #1 (Pictured Cliffs interval and Fruitland top, 1079' 760'): PU and TIH with 4.5" cement retainer, set at 1079'. Pressure test tubing to 1000 PSI. Pressure test casing to 800 PSI. If casing does not test, then spot or tag subsequent plug as appropriate. Mix and pump 28 sxs Class B cement above CR to isolate the Pictured Cliffs interval and cover the Fruitland top. PUH.
- 5. Plug #2 (Kirtland and Ojo Alamo tops and Surface Casing shoe, 190' to Surface): Connect the pump line to the bradenhead valve and attempt to pressure test the BH annulus to 300 PSI; note the volume to load. If the BH annulus holds pressure, then establish circulation out casing valve with water. Mix approximately 20 sxs Class B cement and spot a balanced plug inside the casing from 190' to surface, circulate good cement out casing valve. TOH and LD tubing. Shut well in and WOC. If the BH annulus does not test, then perforate at the appropriate depth and attempt to circulate cement to surface filling the 4.5" casing and the BH annulus to surface. Shut well in and WOC.
- 6. ND BOP and cut off casing below surface casing flange. Install P&A marker with cement to comply with regulations. RD, move off location, cut off anchors and restore location.

Attachment to notice of Intention to Abandon:

Re: Permanent Abandonment Well: 1S Gallegos Federal 26-12-31

CONDITIONS OF APPROVAL

- 1. Plugging operations authorized are subject to the attached "General Requirements for Permanent Abandonment of Wells on Federal and Indian Lease."
- 2. Farmington Office is to be notified at least 24 hours before the plugging operations commence (505) 599-8907.
- 3. The following modifications to your plugging program are to be made:
- a) Place the Kirtland/Ojo Alamo/Surface plug from 212' to surface.

You are also required to place cement excesses per 4.2 and 4.4 of the attached General Requirements.

Office Hours: 7:45 a.m. to 4:30 p.m.
