Tubing Pres. 1940
Int. Casing Pres. Tbg. SI Pres.
Tbg. Inj. Pres. Max. Inj. Pres. Pressured annulus up to 300 psi. for 70 mins. Test passed failed.

REMARKS:

Checked the BH by having it dug out & made sure there were no obstructions to the wellhead casing. The test was run for 70 mins because of a bad tubing gauge and taking time to replace it. We began by using a chart but it was a 20 day chart & gave the well then just a gauge on the casing. The service company had a chart recorder set but at 300 lbs it was too difficult to tell if there was any significant pres. drop below 100.
