Describe Cause of Problem and Remedial Action Taken. (Attach Additional Sheets If Necessary)

The drain valve on the condensate storage tank froze and broke allowing fluid to release from valve and overflow water drain tank. Remedial actions included replacing drain valve and removing approximately 522 cu yds of soil from locations underlying and surrounding the water drain tank and the condensate tank drain valve. The vertical extent of soil excavation was bed rock. Excavated soils were land farmed on location.

4ft

Describe Area Affected and Cleanup Action Taken. (Attach Additional Sheets If Necessary)

Fluids were contained inside the bermed area. Soil impacts were limited to areas surrounding the water drain tank and underlying the drain valve on condensate tank.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
