testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.) Plans are to add the MV interval to the existing DK well and then commingle production from both zones per DHC Order 11363. A sundry detailing the DK forecast will be filed before actual commingling occurs. A brief detail of the procedure we will be using is as follows: MIRU. COOH w/production tubing. Isolate existing DK interval with bridge plug. PT casing and remediate with cement if casing fails pressure test. Run GR/CCL/CBL if needed & remediate with cement if the interval completing isn't adequately covered. Perforate & stimulate the MV intervals. Remove bridge plug and return well to production with the MV & DK intervals commingled. May flow test the MV before commingling occurs. A workover pit will be used during the workover and will be lined & fenced. Once the workover is complete, the pit will be closed. Attached is the C102 for the Mesaverde zone.
