Re: State Nos. 25, 26, 27; B-28-20N-9W
State #100; G-28-20N-9W

Dear Sirs:

After looking more closely at your C-105's for the referenced wells, filed on November 15, 1982, we found that some data are incomplete. The depth of the casing and the depth of the tubing are not included.

Also missing from the files of the referenced wells are C-103's. A C-103 must be filed within ten days following commencement of drilling, indicating how and date the well was spudded. Another C-103 must be filed showing the casing and cement pressure test.

A directional survey must be run on the State #100. Rule 111 requires that a deviation test be run on any well which is drilled or deepened with rotary tools, at least each 500 feet or at the first bit change succeeding 500 feet.

A field inspection will be made of your leases this month.

Yours truly,

Jeff A. Edmister
Geologist II
