DIST. 3

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Plan to drill 13 5/8" hole to approx. 220 feet and cement 9 5/8" surface casing and circulate cement to surface. Drill out from under surface casing with 8 3/4" bit to a total depth of about 7350 feet. Plan to test or core all prospective pay zones where necessary and in the event of a producer, run 5" 15.25 casing to total depth and cement with 150 sacks. In the event of a dry hole, we will plug and abandon in accordance with USGS rules. There will be a Boreid portable gas detector on the well from the surface casing point to total depth and electric logs will be run from the surface casing point to total depth.

The names and estimated depths of prospective pay zones are as follows:
Pictured Cliffs - - 2600' Point Lookout - - 4730' Gallup Sand - - 5050'
Graneros Sand - - 6550' Dakota Sand - - 6940'

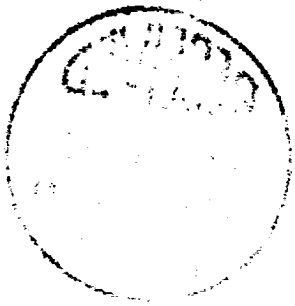

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
