17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

Plans to convert the present dual completion as outlined on Form C-103 approved by the Commission April 22, 1965, have been changed. Production from the Otero-Gallup pool has declined to a marginal 3 BOPD. It is now proposed to convert the original dual completion to produce the Dakota gas through a single string of 2 3/8" tubing set in the permanent Model "D" packer and produce the Gallup oil by flowing it periodically up the casing-tubing annulus. The proposed dual completion producing method will defer abandonment of the Gallup (upper) oil zone.

Gentlemen:

Mechanical producing problems and declined production of the marginal Gallup (upper) zone in our present dual completion well, Northeast Haynes No. 8, Unit P, Section 15, T24N, R5W, Rio Arriba County, New Mexico, makes it necessary to alter the initial dual zone producing mechanics to enable continued production from both zones. Approval for the original dual completion method was granted under Order No. MC-1387, October 10, 1963.

Production from the upper Gallup oil zone has declined to 3 BOPD. Exception to Rule 107 (d)(1) is requested to authorize Dakota gas to be produced through a single 2 3/8" O.D. tubing string set in the permanent Model "D" packer and to produce the Gallup (upper) zone by periodically flowing it up the casing-tubing annulus. By utilizing this method, the lower Dakota gas zone can be produced more efficiently and abandonment of the marginal Gallup oil zone can be deferred.

A schematic diagram of the proposed method of converting the present dual completion is attached.

If any additional information is required, please advise.

Very truly yours,

Original Signed By
BEN W. SMITH
