## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Gulf Designation: Apache Federal No. 3.

The well was temporarily abandoned September 3, 1955, after meeting 4 barrels fluid per hour, 90% water. 2000 ft. It is proposed to plug and abandon as follows: 5-1/2" casing cut at 2102' with 100 sacks. With hole full of heavy mud will dump 10 sacks cement from total depth to 2082' to cover open hole and perforations at 2082' to 2102'. Will cut off 5-1/2" OD casing at approximately 1500'. Will dump 10 sacks on top of casing stub which should fill approximately 30'. Will dump 10 sacks at 157' to cover surface casing shoe. Will cap with 10 sacks in top of surface casing at base of collar and cement cementation surface.

*If the 5 1/2" casing is cut off below 1565', a 100' plug should be placed across the Ojo Alamo. J. H. H.*

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
