JOIL CONTROL BOARD - COMMISSION

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in YEA medium for 24 h at 28 °C. The cell concentration was adjusted to 10⁸ cells/ml. The cells were then mixed with the plasmid solution and the mixture was transformed into *Agrobacterium* strains. The transformation efficiency was determined by the number of colonies formed on the YEA medium. The results are shown as the mean ± SD of three independent experiments.
