

Box E
Bloomfield, New Mexico
October 16, 1957

Mr. A. L. Porter, Secretary and Director
Oil Conservation Commission
Box 871
Santa Fe, New Mexico

Dear Sir:

This is to request administrative approval for a well dually completed in the Graneros Formation and Chacra Formation. The Amerada Petroleum Corporation's Jicarilla Apache "F" #6 is located 990' FNL and 1140' FWL, Section 22, T-25-N, R-5-W, Rio Arriba County, New Mexico.

This well has been completed in the Graneros Formation and the Chacra Formation. Completion has been accomplished in the following manner.

Spudded 15" hole @ 8 PM 8-16-57, and drilled to 242'. Ran 7 jts. 10-3/4" Csg. and set at 231' and cemented w/ 175 sacks cement mixed 2% jel. Pumped plug to 220' with Max. Pressure of 500# - Cement Circulated. W.O.C. - Tested Csg. with 600# press. - held OK. Started drilling 9-7/8" hole @ 4 PM 8-18-57, and drilled to 3960', ran Schlumberger Surveys, and ran 97 jts. 7-5/8" OD Csg. and set @ 3960' & cemented w/ 400 sacks cement mixed 2% jel. Pumped plug down with 1500#. WOC - Ran temperature survey and found top of cement outside of 7-5/8" Csg. at 3935' or 99% fill. Started drilling 6-3/4" hole, with gas, at 3:30 PM 8-30-57, and drilled to 7195'. Ran 133 jts. 4 1/2" OD Liner to 7164', and top of liner hanging in 7-5/8" Csg. @ 3919'. Cemented 4 1/2" OD Liner with 200 sacks cement mixed 2% jel. Squeezed top of liner with 100 sacks cement. WOC - Tested 4-1/2" Liner with 2000# pressure & did not hold. Set a Baker Cast Iron Bridge Plug @ 7156' and tested with 3000# press. - Held OK. Perforated 4 1/2" OD Liner (Graneros Zone) from 7108' - 7144', and perforated 7-5/8" OD Casing (Chacra Zone) from 3780' to 3808'. Set Baker Model D Production Packer at 3845' in 7-5/8" Casing below Chacra Perforations. Ran 3-1/2" Reg. Tbg. and set @ 3845' in top of Baker Packer. Swabbed Graneros Zone in. Well flowed 288 bbl. distillate in 24 hours, Gas Volume 4,257,000 CFPD thru 2 1/2" choke, TP 1750#. (24 hr. test based on 4 hour test). Sand oil fraced 7-5/8" Csg. (Chacra Zone) from 3780' to 3808' with 30,000 gallons diesel oil and 30,000# sand. Max. Press. 2350#, Min. 2250#, Avg. Inj. rate 39.9 BPM. Started well flowing by injecting gas from Graneros Zone. Well tested 768,000 CFPD thru 3/4" choke, CP 630#.

Approval is asked for this dual completion to allow production from both known producing formations without the high initial cost of drilling two wells.

The offset operators of this dual well have been notified and also enclosed are: Schematic Diagram of the mechanical installations: Platt showing the location of this well and the offset operators; Affidavit from the packer setting company stating that the packer was set at the depth shown; Packer Leakage tests as observed by a member of the Oil Conservation Commission.

Any further information required will be furnished upon your request.

Yours very truly,

D. F. Furse

Test performed by <u>Curtis A. Golson</u>	Title <u>Farm Boss</u>
Witnessed by <u>Mr. Simmons</u>	Title <u>From State Land Office</u>
REMARKS: <u>Mr. A. R. Kendrick</u>	<u>Engineer - Oil Conservation Commission</u>

NOTE: Recording gauge pressure charts, test data sheet, and a graphic depiction of all phases of the test shall be submitted with this report.

AFFIDAVIT:

I HEREBY CERTIFY that all conditions prescribed by the Oil Conservation Commission of the State of New Mexico for this packer leakage test were complied with and carried out in full, and that all dates and facts set forth in this form and all attached material are true and correct.

W. J. Furr For Amerada Petroleum Corporation
(Representative of Company making test) (Company Making Test)

INSTRUCTIONS

(NORTHWEST NEW MEXICO ONLY)

1. At least seventy-two hours prior to the commencement of this test, the operator shall have notified the Aztec Office of the Oil Conservation Commission in writing of the exact time said test is to be commenced.
2. The packer leakage test shall commence with both sides of the completion shut-in. Both sides of the completion must be shut-in at least seven days. This shut-in must show on the charts of the pressure recorder and also must appear on the data sheets.
3. For Flow Test No. 1, one side of the dual completion shall be produced with the other side shut-in. Such test shall be continued for seven days, and shall be at a rate of flow approximating the normal rate of flow for the zone being produced. Note: Where gas is flowed to the atmosphere in taking the initial packer test, the well shall be flowed for three hours.
4. Following the completion of flow test No. 1, the well will again be shut-in for seven days.
5. Flow Test No. 2 shall be performed with the previously shut-in side of the dual completion flowing and with the flowing side of the completion used in Flow Test No. 1 remaining shut-in. This test shall be conducted exactly as outlined under Flow Test No. 1, and must be performed even though no leak was indicated by Flow Test No. 1.
6. All pressures, throughout the entire test, must be continuously measured and recorded with recording pressure gauges.
7. The accuracy of the recording gauges shall be checked at regular intervals throughout the test with a dead weight test gauge (Dwt), and such readings shall be recorded on the test data sheet provided.
8. This form must be completed and filed in duplicate with the Aztec Office of the Oil Conservation Commission within 15 days following the completion of the testing, and must be accompanied by:
 - a. all of the charts, or copies thereof, used on the pressure recorders during the test.
 - b. The test data-sheet (s), or copies thereof, required under paragraph 7 above.
 - c. a graph depicting the pressures and their changes, for both sides of the completion over the entire test.
9. This packer leakage test shall be performed upon the dual completion of any new wells so approved by the Commission. This test shall also be required each year during the annual deliverability test on gas wells. This test shall be required until such time as the Commission has sufficient information on testing dual completions in San Juan Basin on which to base a simplified packer leakage test. The Commission may also request packer leakage tests at any time they feel that a new test is desirable.

STATE OF NEW MEXICO

COUNTY OF SAN JUAN

I, Mack Mahaffey, being first duly sworn upon my oath depose and say as follows:

I am an employee of Baker Oil Tools, Inc., and that on October 6, 1957, I was called to the location of the Amerada Petroleum Corporation
(Name of Company)

Jicarilla Apache "F" #6 Well located in the NW/4 NW/4
(Well Number)
of Section 22, Township 25N, Range 5-W, N.M.P.M., for advisory service in connection with installation of a production packer. In my presence, a Baker Model D Production Packer was set in this well at 3845' feet in accordance with the usual practices and customs of the industry.

Mack Mahaffey
Branch Manager

Subscribed and sworn to before me, a Notary Public in and for San Juan County, New Mexico, the 15th day of October, 19 57.

MY COMMISSION EXPIRES MAY 25, 1960

Charlie Campbell
Notary Public in and for San Juan County, New Mexico
