DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was spudded on December 3, 1962 and drilled to a depth of 213'. 6-5/8" casing was set at that depth with 135 sacks of neat Incon cement containing 2% calcium chloride. Cement circulated to surface. After waiting on cement tested 4-5/8" casing to 450 lbs. for 30 minutes. Test o.k. Reduced hole to 7-7/8" at 213' and resumed drilling.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
